Tegg's Nose Rocks! Letter Hunt

Travel back in time with **Danny the Dragonfly** to find out how Tegg's Nose Country Park has changed over millions of years.

Three hundred million years ago the spot you are standing on now looked very different. This area would have been covered by a massive river. This time was called the Carboniferous Period.

This area hasn't always been as peaceful as it is today. It's seen ice ages, giant insects like me and massive cracks in the Earth's surface.

NOTICE TO PARENTS: There are vertical rock faces and unfenced drops in the quarry area. Please keep children under close supervision.

Your mission

Like all good time travelers, you are going to have to keep your eyes peeled and your brain switched on. I need you to find 13 letters to help me unravel the missing word on the back of this page.

Did you know…. Danny the Dragonfly was the size of a seagull and an expert hunter?

Here's what to do:

- Find 13 wooden posts around the park that look like this
- Take a look around the post for a picture of Danny. Write down the letter that Danny is holding on the back of this sheet in the correct box e.g. Write the letter you find on post 3 in box number 3 and keeping hunting until you have found all 13 letters.

Your letters will spell out the period of time when the skies were filled with massive insects like me.

Clues

Letter 1: This letter is the only one not on a post and you'll find it in the visitor centre.

Letter 2: Head along the path to the park and admire the view, but don't miss the rounded rocks that were dragged here by powerful ice flows. The rock nearest this letter came from inside a volcano!

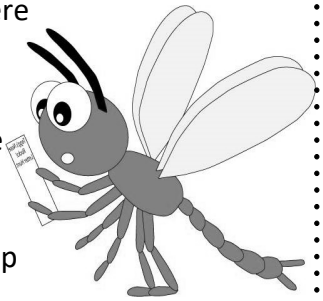

Letter 3: At the big gate take a look down over Cheshire, the hillier rocks that you are standing on were pushed up by massive pressure from inside planet earth, which also created the Red Rock Fault.

Letter 4. When you find this post, look into the distance and imagine everything in front of you covered with ice. That big hill in the distance, that we now call Shutlingsloe, would be the only thing peeking out. Hills & mountains that were above the ice are called Nunataks.

You're getting the hang of this!

Letter 5: Look up at the big rock wall behind this post. Can you spot the shape of an ancient river in the stone? Ask a grown up to help.

Letter 6: Walking carefully, keep to the path behind the deep quarry & you'll find proof that a massive river flowed through here plus another letter to help

Turn over for more clues!

Did you know…. Danny wasn't the only big bug around? He shared this area with 2-metre-long centipedes and scorpions the size of tennis rackets!

Letter 7: Just past the quarry machinery you'll find your sixth letter. Watch your step the big deep quarry is nearby!

Letter 8: A great view and a chance to pick up letter number eight.

Letter 9: Just a little way along the path you'll find letter number 9. Look down and you will see a big pile of waste rock from the quarry. This is called 'spoil'.

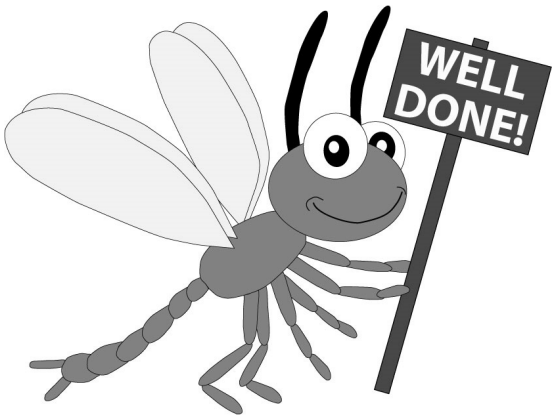

Letter 10: Near a metal bench and a small gate in the fence you'll find letter number 10.

Nearly done!

Letter 11: This letter is right at the top of Tegg's Nose next to a big information board. If it is a clear day, you can see all the way to Wales from here!

Letter 12: On a clear day you can see Macclesfield from the location of this next letter. At one time over 70 mills relied on the water from these hills to make silk.

Letter 13: Before you head back to the car park collect your final letter next to a long wall made of stone. Why not count your footsteps back to where you began?

You're a time travelling genius!

Did you know…. When Danny was around, Tegg's Nose was close to the equator, where Brazil is now? Pass the suntan cream!

Place your letters, in these boxes, to spell Danny's missing word

2	9	5	12	6	1	10	3	8	11	13	4	7

Thank you for helping me to find the missing word!

I hope you enjoyed the Tegg's Nose Rocks! Letter Hunt

Come back soon!
