

800,000 BC	25,000 BC	4,500 BC	2,800 BC	2,500 BC	1,800 BC	800 BC	550 BC
Early humans migrate into Britain from Europe by walking over the land.	The start of The Ice Age where the temperature across Britain was constantly freezing.	Farming is introduced in Britain.	Stonehenge is built.	The Bronze Age began, bronze was used to make tools and weapons.	The first copper mines were mined using strong, bronze pick axes.	The Iron Age began, iron was a stronger more reliable material.	The end of The Iron Age.

Prehistoric	A time in the past before there were written records.
Technology	Using knowledge to invent new devices or tools.
Settlement	A place where people live together in a community.
Archaeologists	People who study history by analysing artefacts and remains.
Excavate	Carefully remove items and look for artefacts.
Migration	When people move to live in a different place.
Monuments	A building or structure which is important for
Tribes	A community of people ruled by a leader who share the same traditions and culture.

Prehistoric Britain began with Stone Age around 2.5 million years ago in 800,000BC and ended in 2400BC. These early humans survived by developing tools made from stone and living off the land.

Thanks to **archaeologists** we know what life was like for early humans in Britain. Their work alongside scientists to find out about the past. They **excavate** sites looking for human/animal remains, artwork, artefacts and monuments.

Some of the history that has been discovered has not always been underground. People from the Bronze Age have left behind many **monuments** that help us to understand their rituals and beliefs. One of the most famous being The Stonehenge.

Earlier in the Stone Age tools were big and heavy. As time went on, their **technology** developed and people became more skilled at making tools using flint. They learnt to tame dogs, control fires and develop their **settlements**.

Bronze Age Britain was between 2400BC to 800BC when people learnt how to make tools from bronze, making life easier. The Bronze Age started at different times in different countries as knowledge spread due to **migration**.

Celts is a name given to people who lived in Europe during ancient times. Celts lives in **tribes** and were ruled by kings and queens. The Celts who moved to Britain brought with them a special skill, they knew how to make iron.
