

Complete this creepy creature's reflection!

Black widow

- Scared of spiders? Coming face to face with the fearsome black widow would be enough to make most people tremble, not least because its bite can be fatal, even to humans.
- The venom of the black widow spider is incredibly powerful, and just one bite from this alarming arachnid can be enough to paralyse prey much bigger than itself.
- Many people think that the female black widow eats the male after mating, although this blood-curdling behaviour is actually very rare.
