

Seasonal Change

I can describe how the weather changes with the seasons

Autumn

The temperature begins to fall
Leaves change colour and begin to fall to the ground
As summer turns to Autumn, the days get shorter and the nights get longer.

Winter

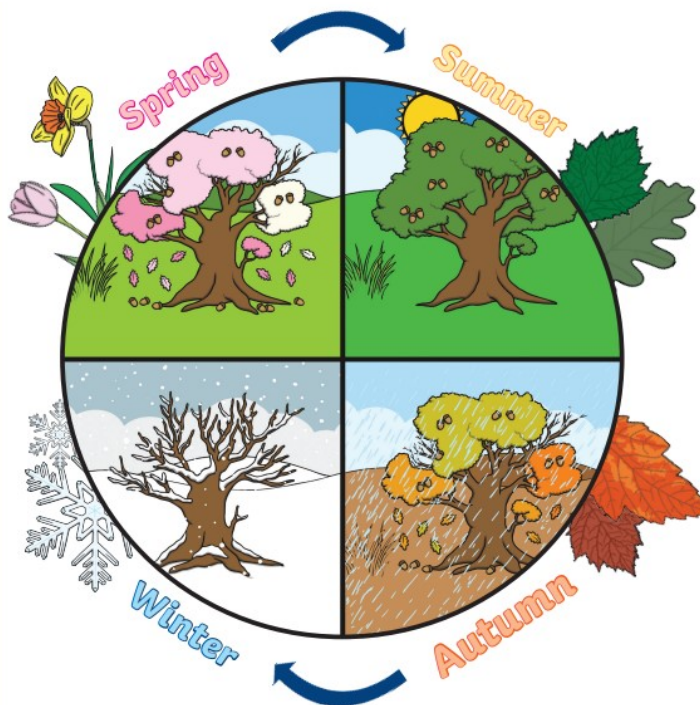

As autumn changes to winter, the weather gets even colder.
Sometimes, we might see snow.
The nights are even longer and the days are shorter

Spring

As winter turns to spring, the weather warms up.
Flowers begin to grow like daffodils and blossom will appear on trees
Daylight gets longer during the spring months

Summer

As spring turns to summer, the weather warms up even more
Daytimes are longest during the summer
Sunflowers, lavender and daisies can be seen

Key Words	Meaning
Autumn	The season before winter and after summer where leaves fall from the trees.
Winter	The coldest season of the year. You might sometimes see snow.
Spring	The season after winter and before summer. The days start to get longer and the weather gets warmer.
Summer	The warmest of all of the seasons
Sunrise	When the sun appears to come up in the morning
Sunset	When the sun appears to go down at night time
Hail	Pellets of frozen rain
Sleet	Rain with a little bit of ice that has started to melt
Fog	A thick cloud made up of little water droplets
