

Keys to Success Activity

For this activity you need to encourage your family to be more environmentally friendly at home, linked to our geography topic on Climate Change. Remember it can be really simple things such as turning off lights, turning down the thermostat/heating or using the tumble drier less to save energy and therefore reducing carbon emissions. You could also recycle more to save new materials being made, walk instead of using the car, plant new plants, buy local to save on transport of goods. Simply fill out the table below over the holiday with the pledges your family have made and bring it back into school when you have completed it.
