Name:

Boost test confidence and results with our curriculum-aligned bite-sized revision.

STUDY SQUAD

Name: _____

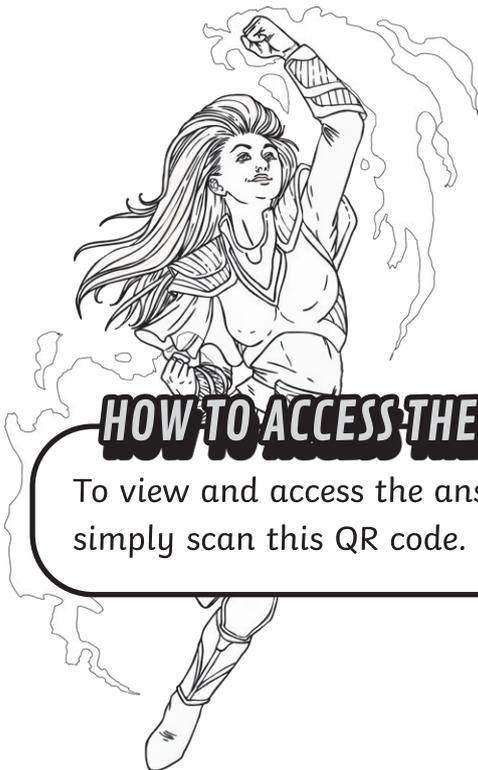

NEW RECRUIT

HOW TO ACCESS THE VIDEOS AND GAMES

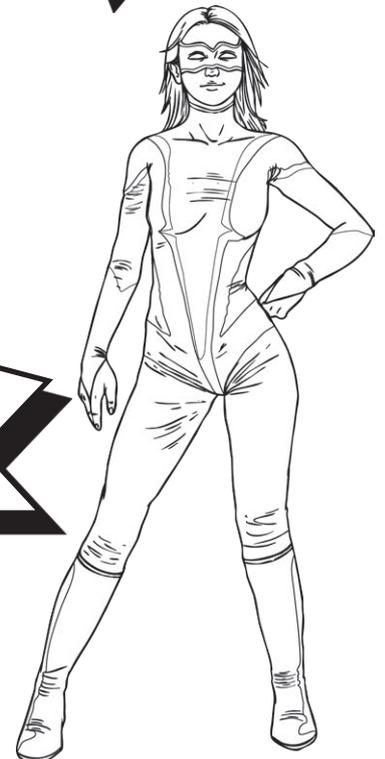

To view and access the concept revision videos, interactive Go! Games and the answer booklet, your adult will need a **Twinkl account**. If your adult doesn't already have a Twinkl account, they can create a **free account** by going to www.twinkl.co.uk and selecting '**Join**' in the top right-hand corner.

The QR codes throughout the workbook are a great way of accessing the interactive activities but you can also find them on the Study Squad page. Simply scan this QR code to explore the whole **Study Squad range**.

HOW TO ACCESS THE ANSWERS

To view and access the answer booklet, simply scan this QR code.

Finding Angles and Lengths in Quadrilaterals	120		

MEET THE STUDY SQUAD

STUDY SQUAD

Each of the **Maths Heroes** has a superpower relating to a particular unit of maths. Together, they will guide you through the concepts in this workbook.

THE DATA DEFENDER

QUICK QUADRANT

MEASURE MACHINE

THE SHAPE SAVIOUR

On each page, the Study Squad have included a game and video to help you boost your maths superpower. Scan the QR codes, using a device with a camera and internet access, to continue your hero training.

You'll get to know the **Study Squad** children as they pop up throughout the workbook.

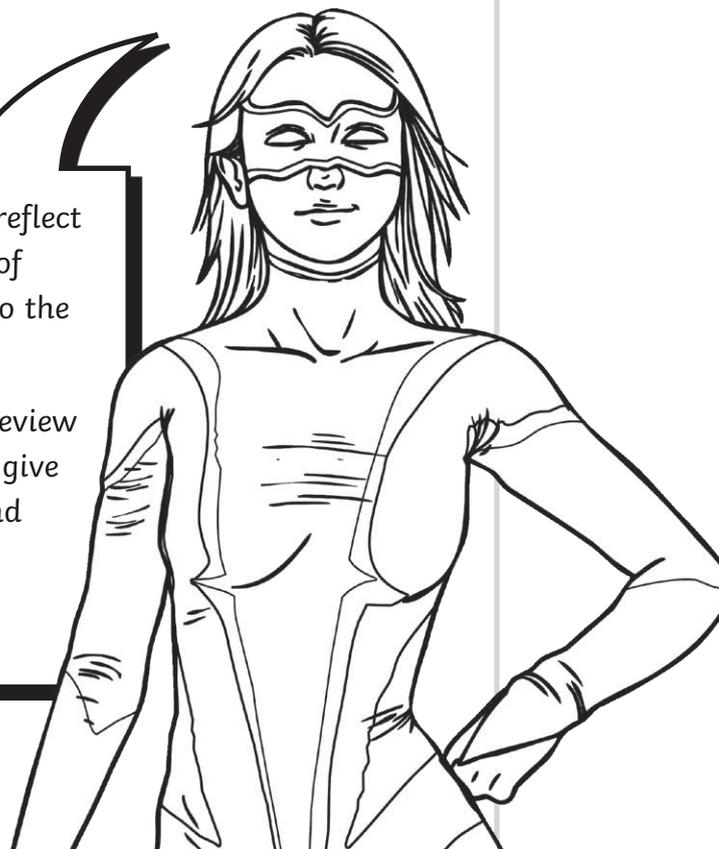

SELF-REFLECTION INSTRUCTIONS

After each concept, you will have the opportunity to reflect on your understanding. Once you have answered all of the questions, colour or shade in the superhero next to the statement that you most agree with.

At the end of each concept, use the self-reflection to review which areas you found trickier than others. This will give you an idea of which areas you need support with and which areas you are more confident with.

Ready for your first maths mission?

I DON'T UNDERSTAND THIS YET!

I found this tricky. I need support with this.

I MOSTLY UNDERSTAND THIS!

I can do this mostly but sometimes I need support.
I may need some more practice.

I COMPLETELY UNDERSTAND THIS!

I can do this by myself. I could explain how to solve these questions to someone else.

ESTIMATING AND READING SCALES

SUPERCARGE!

Measure out 345ml using combinations of the tablespoon, the egg cup and the drinking glass. Which combination uses the **fewest** objects? Show your working out.

SCORE: /2

Table Spoon
25ml

Egg Cup
40ml

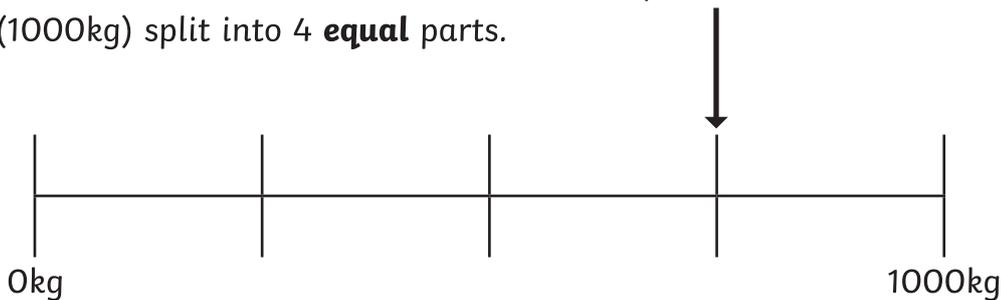

Drinking Glass
200ml

Answers: 1 drinking glass, 3 egg cups and 1 tablespoon. (given in any order)

BOOST YOUR SUPERPOWERS

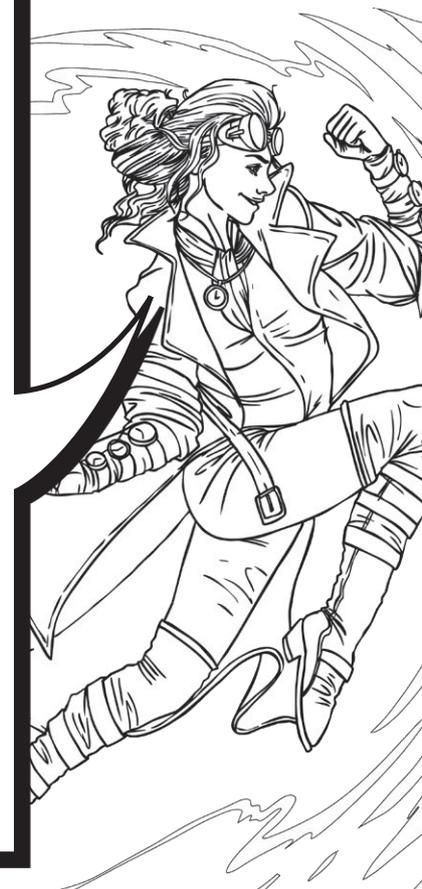

When reading scales, we first need to establish how many parts the scale has been divided into. This example scale shows 1 tonne (1000kg) split into 4 **equal** parts.

1 tonne (1000kg)			
250kg	250kg	250kg	250kg

$1000\text{kg} \div 4 = 250\text{kg}$
This scale is counting in multiples of 250kg.

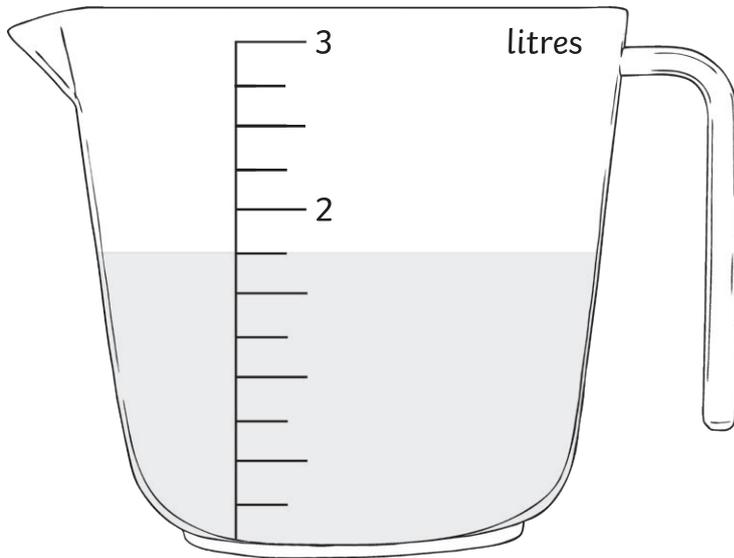

Now that we know the scale is counting in multiples of 250kg, we can see that the arrow is pointing to the third interval, which is worth 750kg (250kg + 250kg + 250kg).

MATHS MISSION

1

A chef makes gravy in a jug.

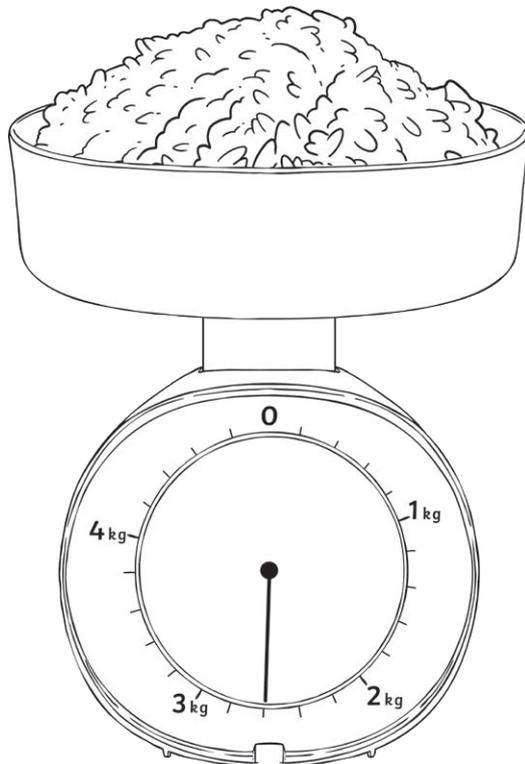

In litres, how much gravy is in the container?

 litres

1 mark

2

This scale shows how much the rice weighs.

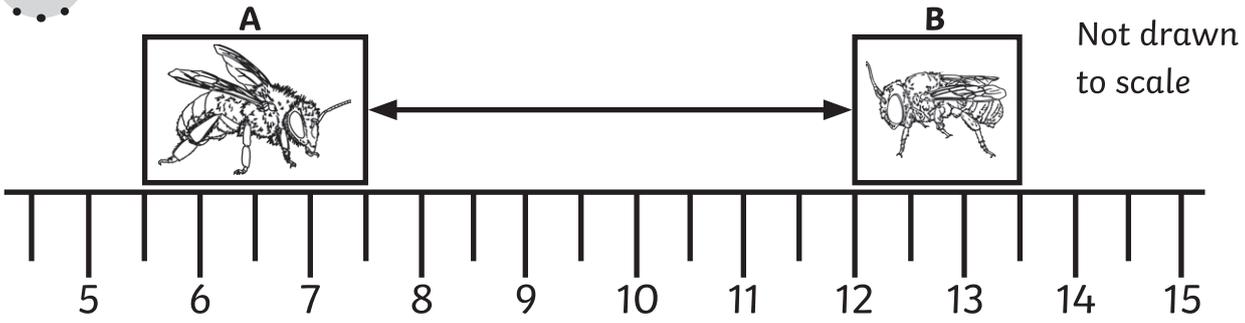

In **kilograms**, how much does the rice weigh?

 kg

1 mark

3

Here are two bees on a centimetre scale.

a) What is the distance between the two bees?

 cm

b) How long is bee A?

 cm

c) What is the difference in lengths of the two bees?

 cm /5

TOTAL

MISSION COMPLETE!

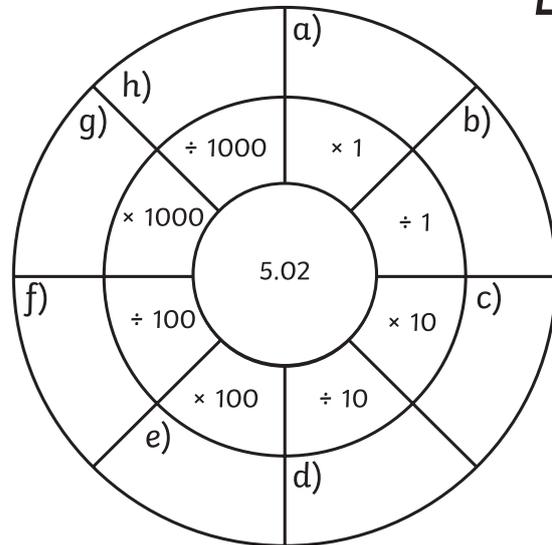

How confident do you feel?

CONVERTING BETWEEN METRIC UNITS

SUPERCARGE!

SCORE: /8

Write the answer to each calculation in the outer ring of the wheel.
Give your answers up to 3 decimal places.

Answers: a) 5.02 b) 5.02 c) 50.2 d) 0.502 e) 502 f) 0.050 g) 5020 h) 0.005

BOOST YOUR SUPERPOWERS

Metric units use a base ten system so to convert between units, we divide and multiply by powers of ten.

$$1 \text{ tonne} = 1000\text{kg}$$

$$1000\text{g} = 1\text{kg}$$

$$\frac{1}{2}\text{kg} = 0.5\text{kg} = 500\text{g}$$

$$\frac{1}{10}\text{kg} = 0.1\text{kg} = 100\text{g}$$

$$1000\text{ml} = 1\text{l}$$

$$\frac{1}{2}\text{l} = 0.5\text{l} = 500\text{ml}$$

$$\frac{1}{10}\text{l} = 0.1\text{l} = 100\text{ml}$$

$$\frac{1}{100}\text{l} = 0.01\text{l} = 10\text{ml}$$

$$1000\text{m} = 1\text{km}$$

$$100\text{cm} = 1\text{m}$$

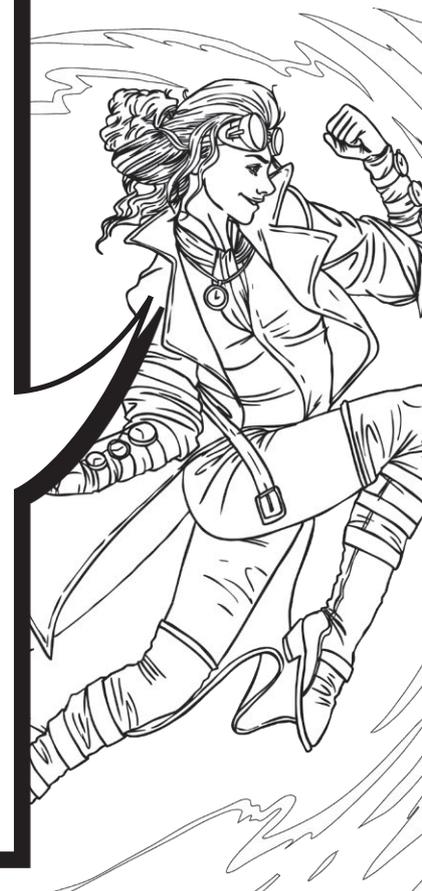

$$10\text{mm} = 1\text{cm}$$

$$\frac{1}{2}\text{m} = 0.5\text{m} = 50\text{cm}$$

$$\frac{1}{4}\text{m} = 0.25\text{m} = 25\text{cm}$$

$$\frac{3}{4}\text{m} = 0.75\text{m} = 75\text{cm}$$

$$\frac{1}{10}\text{m} = 0.1\text{m} = 10\text{cm}$$

CONVERTING BETWEEN METRIC AND IMPERIAL UNITS

SUPERCARGE!

SCORE:

a) Drew measured a box that was 150 centimetres long. How many metres long was the box?

b) Felix needed 6 litres of water to water his herb garden. How many millilitres did Felix need?

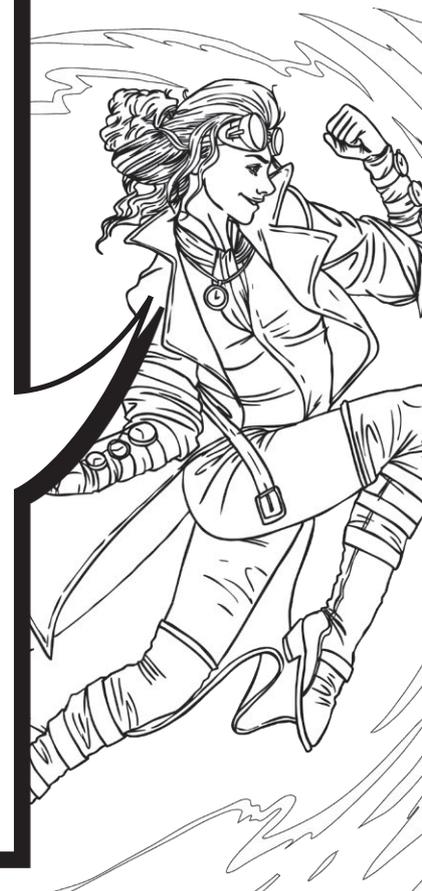

c) Abi ran 500 metres. How many kilometres did she run?

Answers: a) 1.5m b) 6000ml c) 0.5km or $\frac{1}{2}$ km

BOOST YOUR SUPERPOWERS

= equals an approximate conversion.

Capacity	pints (pt) gallons (gal)	8 pints = 1 gallon	1pt = 570ml 1l = 1.8pt
Length	inches (in) feet (ft) yard (yd) miles (mi)	12in = 1ft 3ft = 1yd 1760yd = 1mi	1in = 2.5cm 1ft = 30cm 1mi = 1.6km 1km = 0.6 miles
Mass	ounces (oz) pounds (lb) stones (st)	16oz = 1lb 14lb = 1st	1oz = 28g 100g = 3.5oz 1lb = 450g 1kg = 2.2lb 1st = 6.4kg

MATHS MISSION

1

Write the missing numbers.

5 inches \approx cm

2 litres \approx pints

10 ounces \approx g

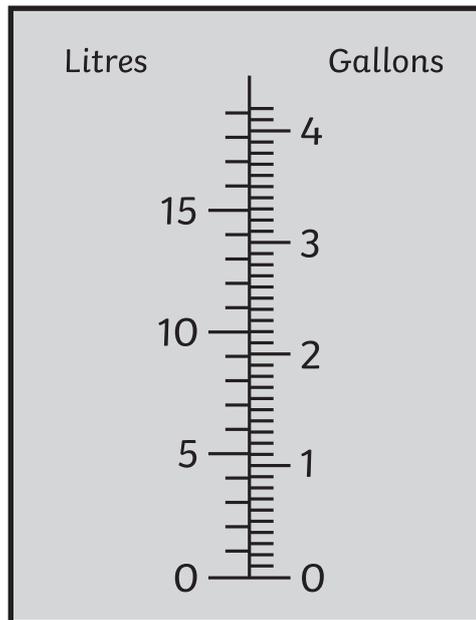

4 miles \approx km

2 marks

2

Here is a scale for converting litres and gallons.

a) Approximately how many litres are there in 2 gallons?

Give your answer to the **nearest litre**.

litres

1 mark

b) Approximately how many gallons are there in 8 litres?

Give your answer to **1 decimal place**.

gallons

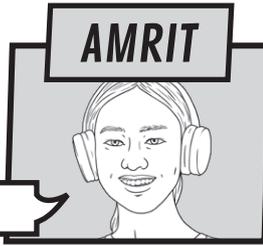

1 mark

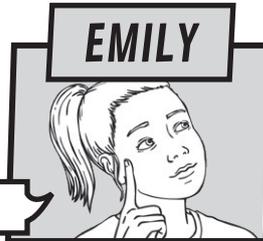

3

Two children are discussing their heights.

Amrit says,

Emily says,

Who is the tallest?

Explain your answer.

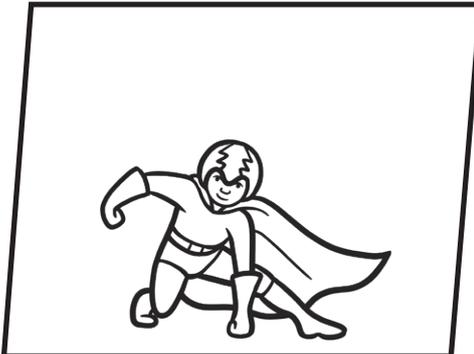

1 mark

MISSION COMPLETE!

How confident do you feel?

SUPERCARGE!

Convert the prices of Doctor Digit's clothes into pence.

One has been done for you.

shirt: £7.49 = **749p**

a) trousers: £8.95 = p

b) cape: £19.50 = p

c) socks: £2.00 = p

SCORE: /6

Convert the prices of The Ratio Rescuer's accessories into pounds.

One has been done for you.

mask: 560p = **£5.60**

d) gloves: 999p = £

e) boots: 2545p = £

f) belt: 1500p = £

Answers: a) 895p b) 1950p c) 200p d) £9.99 e) £25.45 f) £15.00 or £15

BOOST YOUR SUPERPOWERS

Remember: £1 = 100p

We can convert between amounts written in pounds and amounts written in pence by multiplying or dividing by 100.

The decimal point separates pounds and pence.

Remember, there are always two digits after the decimal point in amounts of money.

We can also use calculations to solve problems involving money, e.g.

Abi buys two bananas.
She pays with a £2 coin
and gets £1.44 change.

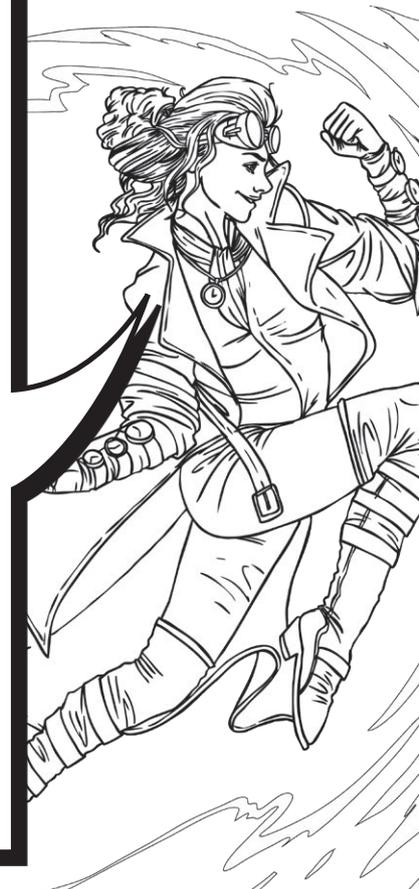

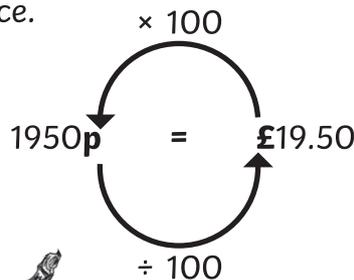

How much does one banana cost?

Write your answer in pence.

$$£2.00 - £1.44 = £0.56 \text{ (two bananas)}$$

$$£0.56 \div 2 = £0.28 \text{ (one banana)}$$

$$= 28p$$

MATHS MISSION

1

Amrit and Felix share **all** of these coins so that they each have the same **amount** of money.

Felix chooses his coins first. Amrit takes the rest of the coins.
Which coins could Felix choose?

1 mark

2

Use the clues to match each of Measure Machine's accessories to each cost.

The goggles cost seven pence more than the scarf.

The watch is the most expensive item.

The scarf costs ten pence less than the watch.

The buckle costs twenty pence less than the goggles.

goggles

£4.95

watch

£4.82

Answers: a) 18:30 b) 12:48 c) 19:05 d) 20:31

BOOST YOUR SUPERPOWERS

Months of the year:

Units of time:

Months with 31 days:

1 minute = 60 seconds

January, March, May, July,
August, October and December.

1 hour = 60 minutes

1 day = 24 hours

Months with 30 days:

1 week = 7 days

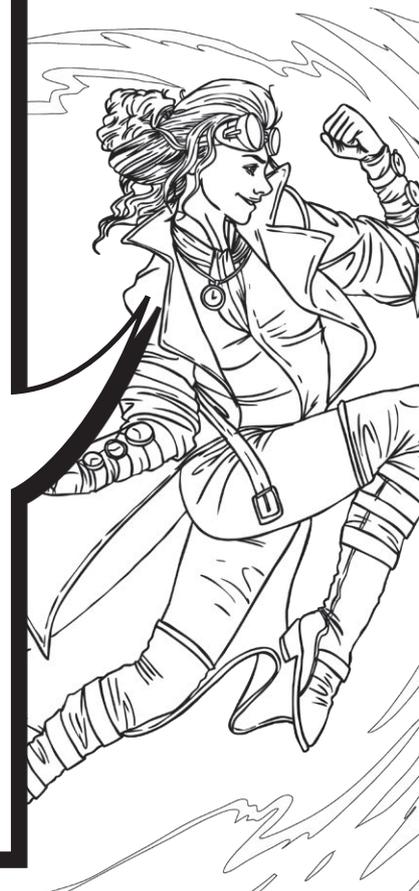

April, June, September
and November.

1 year = 365 days

1 year = 12 months

February has 28 days except during a leap year when it has 29 days.

The Earth takes **365.25 days** to orbit the Sun so every fourth year has 366 days. This is known as a **leap year**.

SOLVING PROBLEMS INVOLVING TIME AND DURATION

PERIMETER

SUPERCARGE!

Calculate the perimeter of these shapes.

SCORE: /4

A = _____ cm

B = _____ cm

C = _____ cm

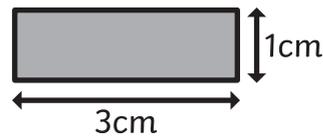

D = _____ cm

Answers: a) 16cm b) 6cm c) 19cm d) 15cm

BOOST YOUR SUPERPOWERS

The perimeter is the total distance around the edge of a 2D shape.

The perimeter of a rectangle can be calculated with the formula:

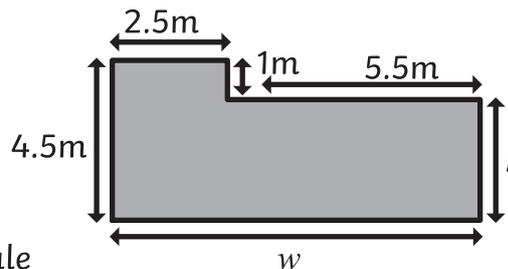

$$\text{perimeter} = (2 \times \text{length}) + (2 \times \text{width})$$

To find the perimeter of a **rectilinear shape** or a **compound shape**, add all up the lengths of the outside edges of the shape.

You may have to use reasoning skills to find the missing sides.

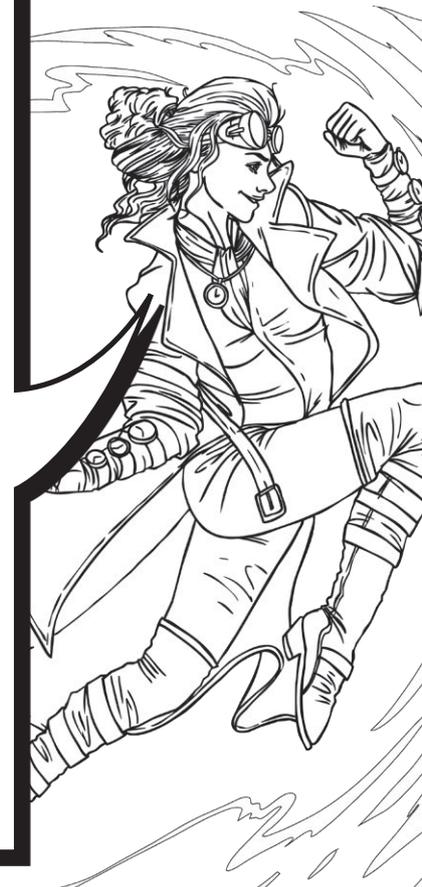

$$l = 4.5\text{m} - 1\text{m} = 3.5\text{m}$$

$$w = 2.5\text{m} + 5.5\text{m} = 8\text{m}$$

Not drawn to scale

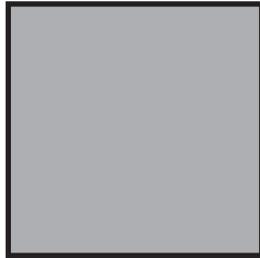

$$\text{perimeter} = 4.5\text{m} + 2.5\text{m} + 1\text{m} + 5.5\text{m} + 3.5\text{m} + 8\text{m} = 25\text{m}$$

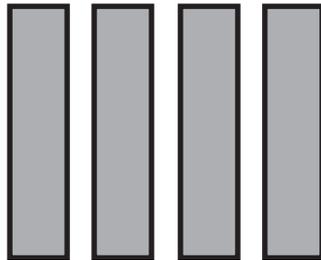

MATHS MISSION

1

The perimeter of a square is **64 centimetres**.

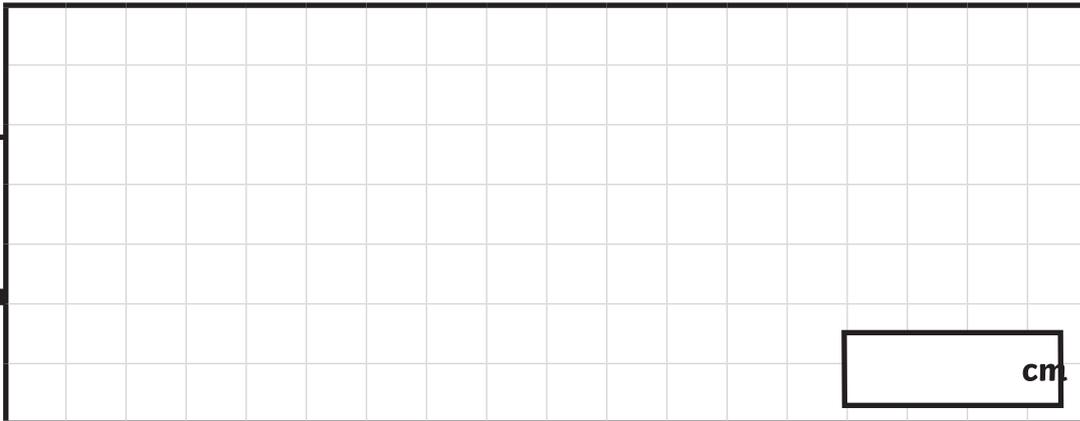

The square is cut into quarters to create 4 identical rectangles.

What is the perimeter of one of the rectangles?

show
your
method

2 marks

2

The following shapes all have a perimeter of 24cm.
Here is a table to show the length of each side.
Complete the table. One shape has been done for you.

	side lengths			
Rhombus	6cm	6cm	6cm	6cm
Rectangle	5cm	___ cm	___ cm	___ cm
Rectangle	8cm	___ cm	___ cm	___ cm
Equilateral triangle	8cm		___ cm	___ cm

2 marks

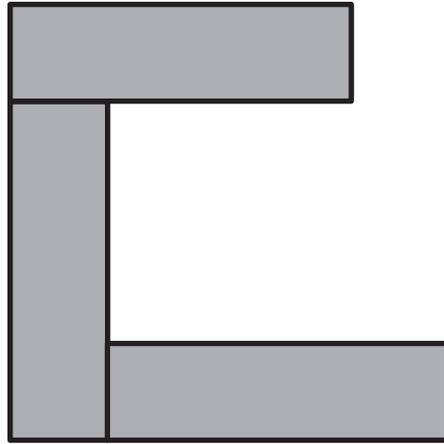

3

Joseph has some identical rectangles.

Not drawn to scale

He makes this shape using three of the rectangles.

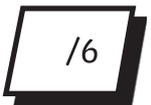

Calculate the perimeter of Joseph's new shape.

show your method

SUPERCARGE!

Calculate the area of each these shapes, shown on a 1cm square grid, by counting the squares.

SCORE:

A = _____ cm²

B = _____ cm²

C = _____ cm²

D = _____ cm²

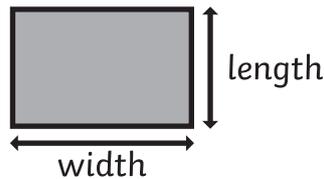

Answers: a) 6cm² b) 4cm² c) 8cm² d) 5cm²

BOOST YOUR SUPERPOWERS

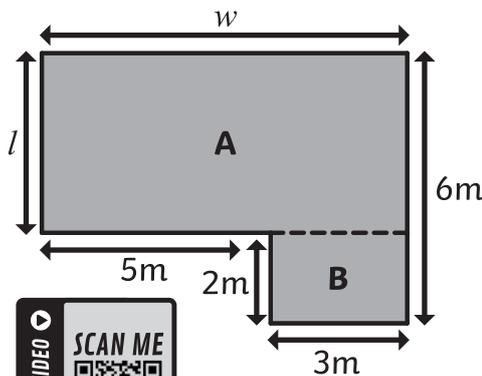

Area is measured in 'square' units. It means the surface area of a 2D shape.

The area of a rectangle can be calculated with the formula:

$$\text{area} = \text{length} \times \text{width}$$

To find the area of a **rectilinear shape** or a **compound shape**, it is easier to split it up into different sized rectangles.

You may have to use reasoning to find the **missing lengths**.

$$l = 6\text{m} - 2\text{m} = 4\text{m}$$

$$w = 5\text{m} + 3\text{m} = 8\text{m}$$

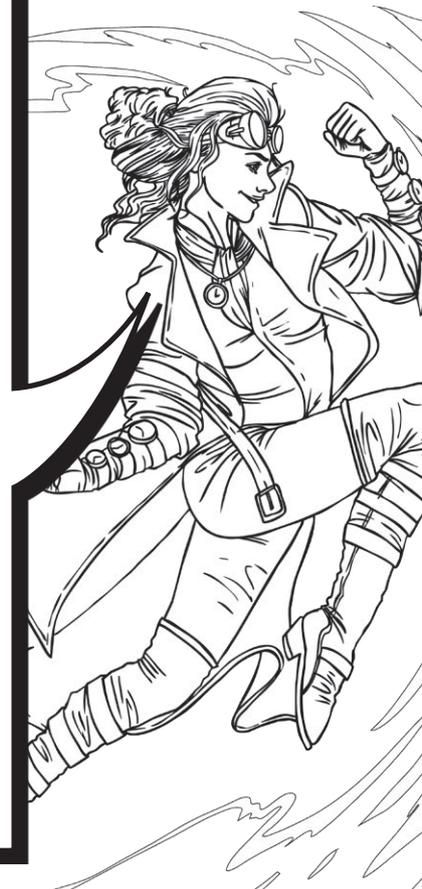

$$\text{area A} = 8\text{m} \times 4\text{m} = 32\text{m}^2$$

$$\text{area B} = 2\text{m} \times 3\text{m} = 6\text{m}^2$$

$$\text{total area} = 32\text{m}^2 + 6\text{m}^2 = 38\text{m}^2$$

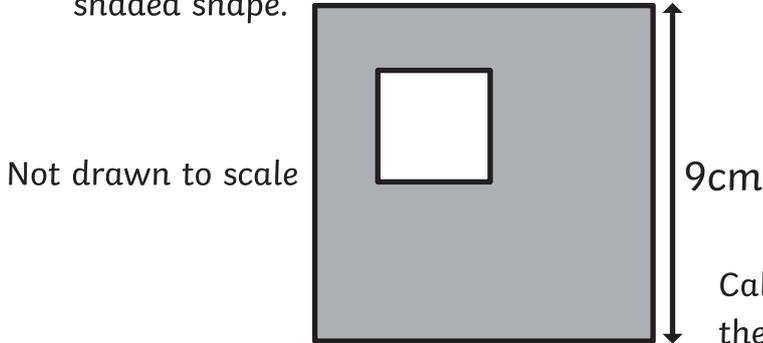

Not drawn to scale

MATHS MISSION

1

The diagram shows a shaded shape with a side length of 9cm. The side length of the white square is one-third of the side length of the shaded shape.

Calculate the area of the **shaded shape**.

TOTAL

MISSION COMPLETE!

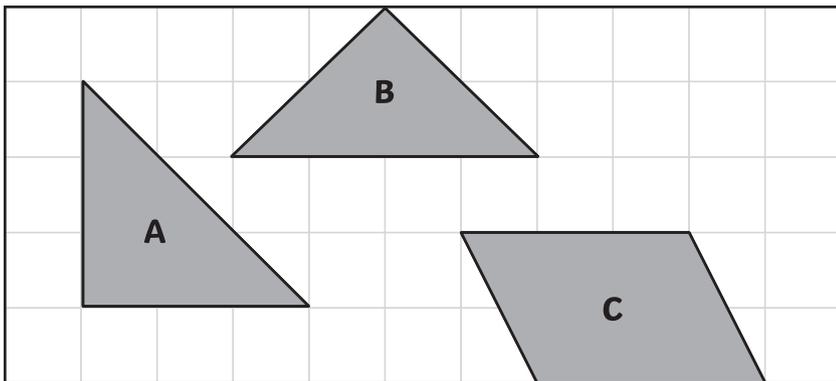

How confident do you feel?

SUPERCARGE!

SCORE: /3

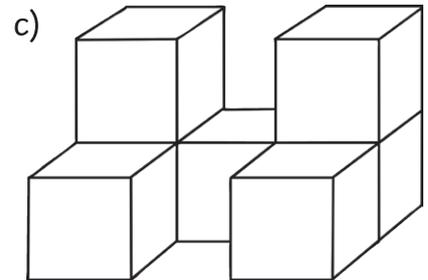

Find the volume of these shapes by counting the cubes.

_____ cubes

_____ cubes

_____ cubes

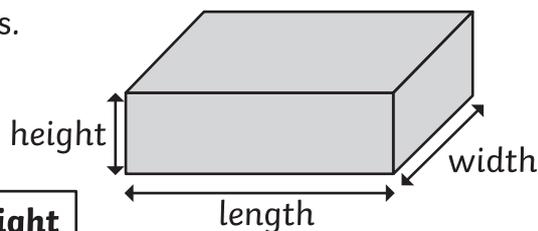

Answers: a) 4 cubes b) 6 cubes c) 7 cubes

BOOST YOUR SUPERPOWERS

Volume is measured in 'cubed' units. It is the measure of how much space a 3D object occupies.

The volume of a cuboid can be found using the formula:

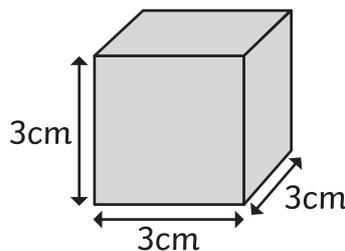

$$\text{volume} = \text{length} \times \text{width} \times \text{height}$$

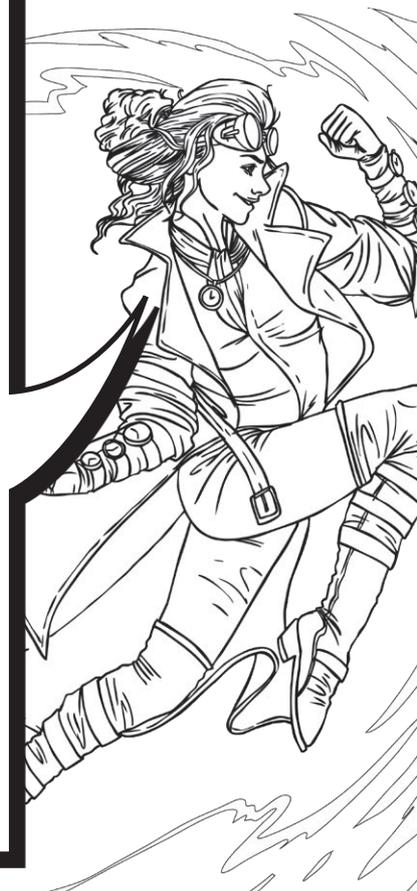

Not drawn to scale

The volume of a cube can be found using the formula:

$$\text{volume} = \text{length of side}^3$$

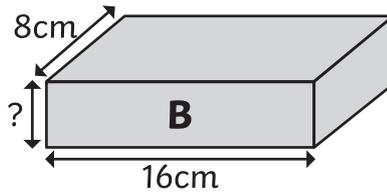

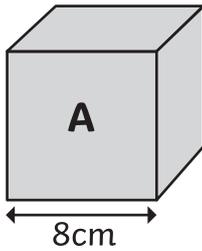

$$\text{volume} = 3\text{cm} \times 3\text{cm} \times 3\text{cm} = 27\text{cm}^3$$

3

Cube A and cuboid B have the same volume.

Calculate the missing length on cuboid B.

show your method

A large grid area for showing the method to solve the problem. A small box at the bottom right of the grid contains the text 'cm'.

WORKING OUT

FINDING MISSING ANGLES

SUPERCARGE!

SCORE: /2

a) I have three sides and three vertices.
 I have two acute angles.
 I have one 90° angle.
 Two of my sides are perpendicular.
 If my two perpendicular sides are equal in length, I have one line of symmetry.
 I have no parallel sides.
 What am I?

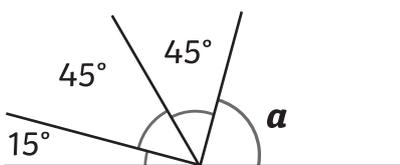

b) I have four sides and four vertices.
 I have two acute angles.
 I have two obtuse angles.
 I have one pair of parallel sides.
 I have no perpendicular sides.
 If two of my opposite sides are equal in length, I have one line of symmetry.
 What am I?

Answers: a) right-angled triangle b) trapezium

BOOST YOUR SUPERPOWERS

When finding missing angles, remember these key facts:

Straight Line (180°)

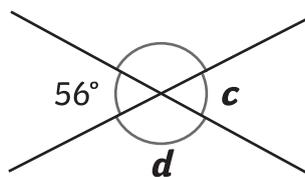

$$15^\circ + 45^\circ + 45^\circ = 105^\circ$$

$$180^\circ - 105^\circ = 75^\circ$$

$$a = 75^\circ$$

Opposite Angles on Intersecting Lines

$$c = 56^\circ \text{ (opposite angles)}$$

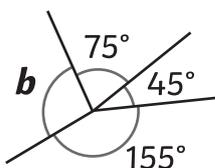

$$56^\circ + 56^\circ = 112^\circ$$

$$360^\circ - 112^\circ = 248^\circ$$

$$248 \div 2 = 124^\circ$$

$$d = 124^\circ$$

Around a Point (360°)

$$75^\circ + 45^\circ + 155^\circ = 275^\circ$$

$$360^\circ - 275^\circ = 85^\circ$$

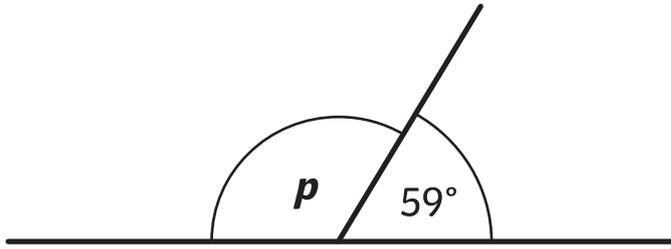

$$b = 85^\circ$$

For further help, check out the missing angles help page at the back of the book.

MEASURING ANGLES

SUPERCHARGE!

SCORE: /5

Answer the quiz questions.

a) If an angle measures 345° , what type of angle is it?

b) If two angles in a triangle are both 40° , what is the size of the third angle?

c) What is the name of the piece of equipment used to measure angles?

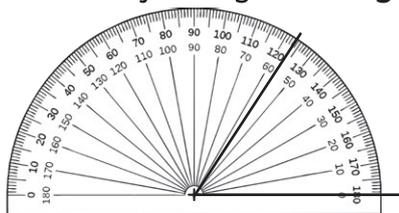

d) If an angle measures 89° , what type of angle is it?

e) How many obtuse angles are there in a parallelogram?

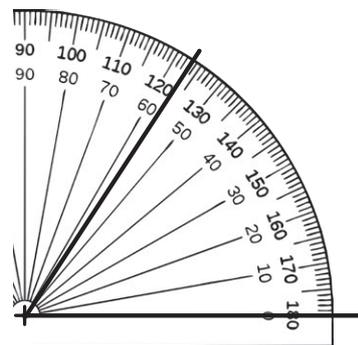

Answers: a) reflex b) 100° c) protractor
d) acute e) 2

BOOST YOUR SUPERPOWERS

We use a **protractor** to measure angles accurately. The unit of measure for angles is **degrees**.

1) Place the **cross** or circle, on the protractor, at the point (**vertex**) of the angle.

2) **Line up** one of the angle lines with **0** on either the inner or outer scale on the protractor.

3) **Count** the marked intervals carefully. Remember to **start from 0**, not 180. In this example, we must count **anti-clockwise** up to the second angle line. This lines up with the mark that is 7 after 50 ($50 + 7$) or 3 before 60 ($60 - 3$) so the angle measures **57°** .

Top Tip: **Estimate** the type of angle before measuring. We can see that this is an **acute** angle so 57° is reasonable.

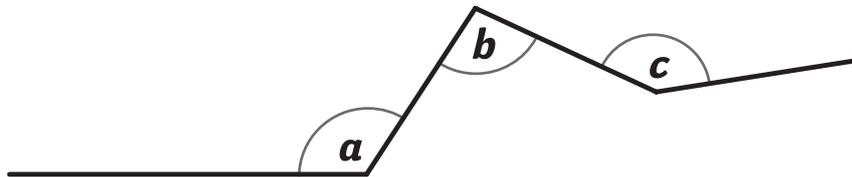

MATHS MISSION

1

This line shows the path taken by The Shape Saviour on her journey back to Hero Hideaway.

Measure each angle accurately using a **protractor** (angle measurer).

$a = \boxed{}^\circ$

$b = \boxed{}^\circ$

BOOST YOUR SUPERPOWERS

Key words

regular polygon: A 2D shape formed with straight lines. All of the sides and angles are equal.

irregular polygon: A 2D shape formed with straight lines. The sides and angles are not all equal.

parallel lines: Lines that run alongside each other in pairs. They never meet and are always the same distance apart.

perpendicular lines: Two lines that meet at a right angle.

quadrilateral: A 2D shape with four straight sides.

scalene triangle: Has no equal sides or angles.

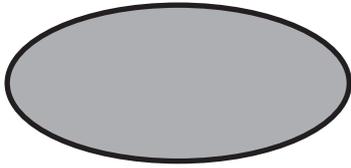

isosceles triangle: Has two equal sides and two equal angles.

equilateral triangle: Has three equal sides and three equal angles.

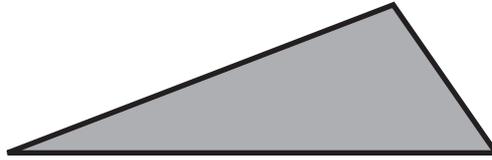

1

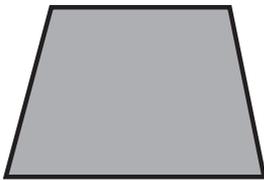

Here are four 2D shapes.

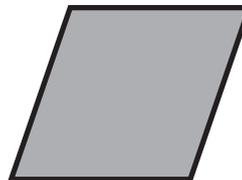

ellipse

scalene triangle

trapezium

parallelogram

a) Emily chooses one shape. She says,

EMILY

It is an irregular polygon.
Its interior angles add up to 180°

Which shape did Emily choose?

1 mark

b) Bartek chooses a **different** 2D shape. He says,

BARTEK

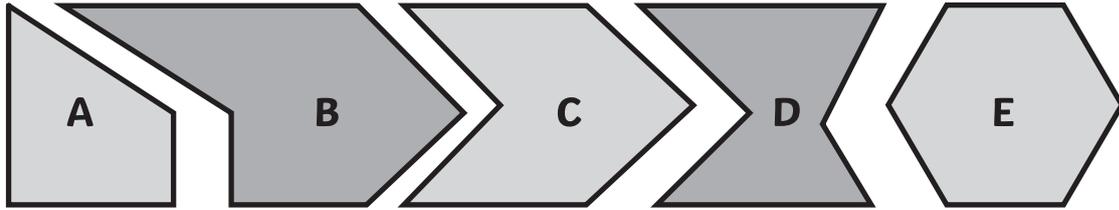

It is a quadrilateral.
It has one pair of parallel sides.

Which shape did Bartek choose?

1 mark

2

Here are six shapes.

Write the letter of the shape that is **not** a hexagon.

1 mark

3

Match each shape to the correct name.

One has been done for you.

scalene triangle

octagon

isosceles triangle

equilateral triangle

pentagon

SUPERCARGE!

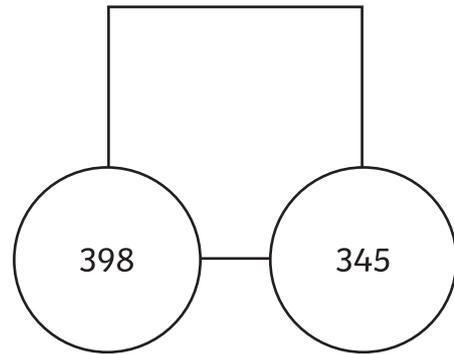

SCORE:

Calculate the **difference** between the two numbers in the circles. Then, **double** it to find the missing number in the square.

a)

b)

Answers: a) 236 b) 106

BOOST YOUR SUPERPOWERS

The perimeter of a circle is called the **circumference** (c).

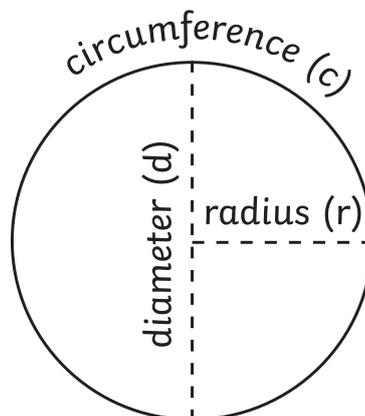

The distance across the circle, passing through the centre, is called the **diameter** (d).

The distance from the centre of the circle to the circumference is called the **radius** (r).

The diameter is twice the length of the radius...

$$r \times 2 = d \quad d \div 2 = r$$

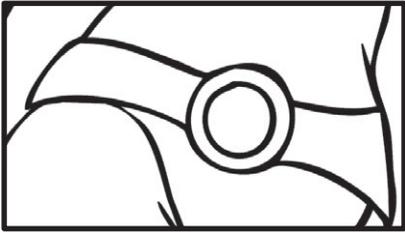

...which means that the radius is half of the diameter.

MATHS MISSION

1

The Fraction Flame's belt buckle has a diameter of 72mm.

Not drawn to scale

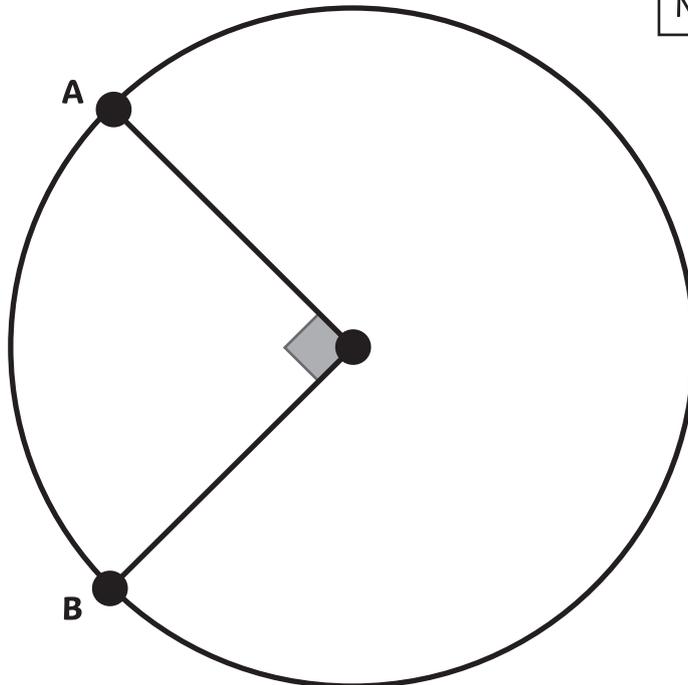

What is the **radius** of her belt buckle?

 mm

1 mark

2

The circumference of this circle is 140cm.

Not drawn to scale

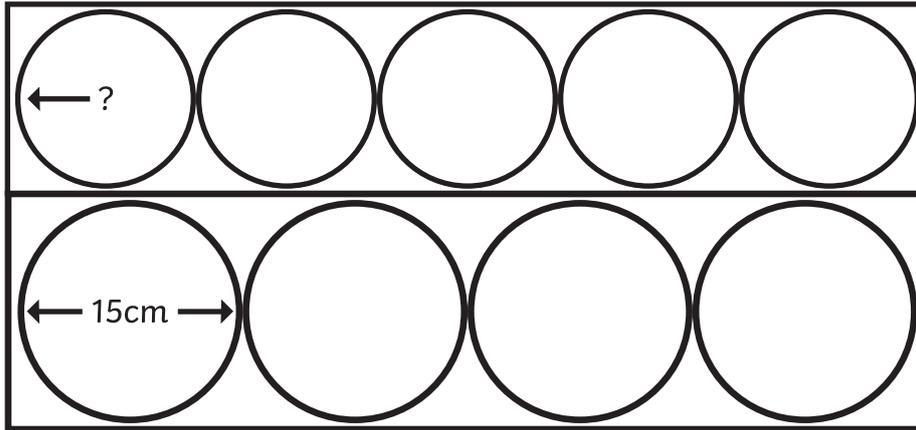

What is the distance around the edge of the circle from **A** to **B**?

 cm

1 mark

3

Four large circles and five small circles fit exactly inside this rectangle.

Not drawn to scale

The **diameter** of a large circle is 15cm.

Calculate the **radius** of a **small** circle.

DRAWING 2D SHAPES

SUPERCARGE!

SCORE:

Label each angle as acute, obtuse, reflex or a right angle.

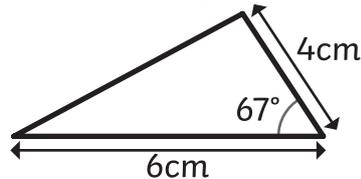

Answers: a) acute b) right angle c) obtuse d) reflex

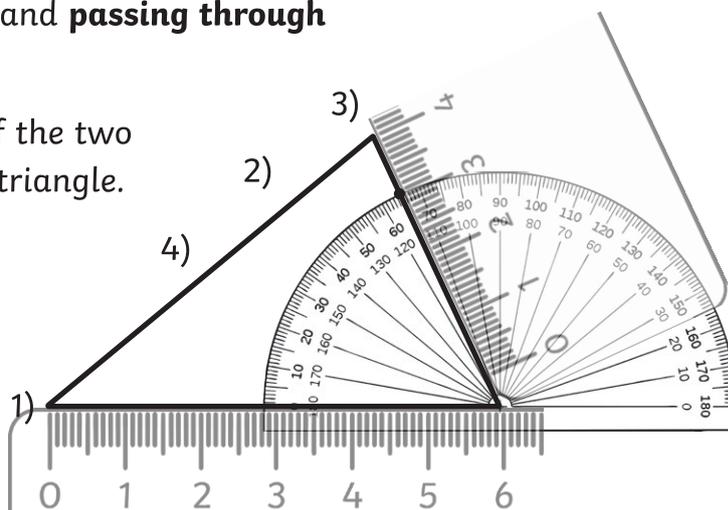

BOOST YOUR SUPERPOWERS

To draw 2D shapes accurately, we need to use a **ruler** for the **lengths** of the sides and a **protractor** for the internal **angles**.

Here is a sketch of a triangle, not drawn to scale. Draw the full-size triangle **accurately** below.

- 1) **Draw a line** accurately using a ruler. This will form one **side** of the shape. Remember to **start from 0**, not the very edge of the ruler.
- 2) **Line up** the centre of the **protractor** with the end of the line and **mark** 67° , making sure to use the right scale on the protractor so you **start from 0**.
- 3) Draw a line measuring 4cm, starting from the end of the first side and **passing through** the 67° mark.
- 4) **Join** the ends of the two sides to form a triangle.

MATHS MISSION

1

Draw **two lines** each measuring **5cm** which join at a **vertex**.

The **angle** should measure **147°**

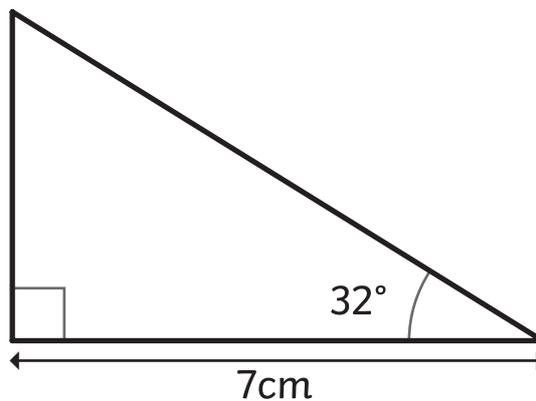

Use a **protractor** (angle measurer) and a **ruler**.

2 marks

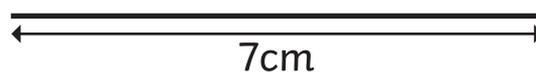

2

Here is a sketch of a triangle. It is not drawn to scale.

Draw the full-size triangle **accurately** below. Use a **protractor** (angle measurer) and a **ruler**.

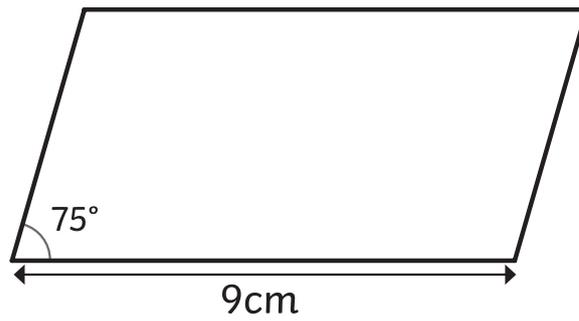

One line has been drawn for you.

2 marks

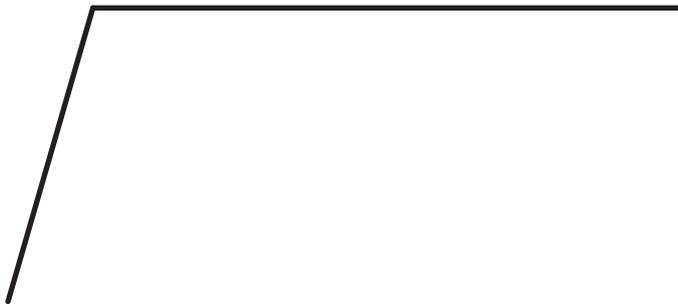

3

Here is a sketch of a parallelogram. **It is not drawn to scale.**

Complete the drawing of the full-size parallelogram **accurately** below. Use a **protractor** (angle measurer) and a **ruler**.

Two lines have been drawn for you.

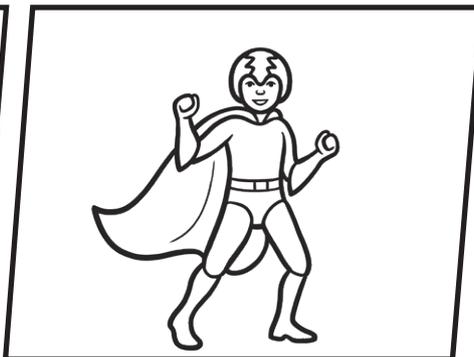

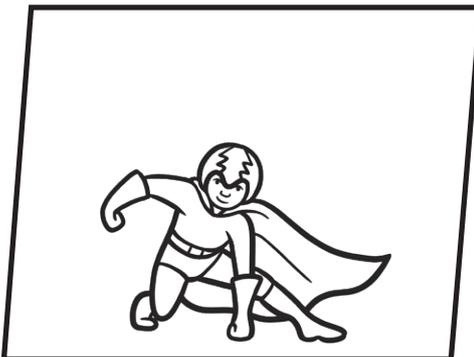

2 marks

TOTAL

MISSION COMPLETE!

SCORE: /6

Sort the 2D shapes into the correct columns.

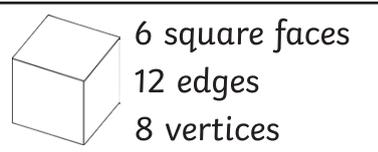

Shapes with one right angle	Shapes with two or more right angles

Answers: one right angle) A and F
two or more right angles) B, C, D, E

BOOST YOUR SUPERPOWERS

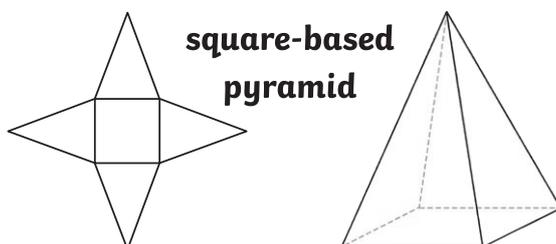

3D shapes have three dimensions: **height**, **width** and **length**. 3D shapes can be compared and classified according to their properties such as their **faces**, **edges** and **vertices**.

A polyhedron is a 3D shape with straight edges and flat faces that are all polygons. Spheres, cylinders and cones are not polyhedrons as they have **curved surfaces**.

A shape **net** shows which 2D shapes can be joined and folded to make a 3D shape.

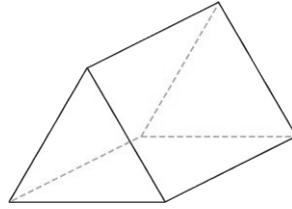

When you are drawing a net, or solving a problem involving a shape net, think carefully about where the edges of the faces meet.

MATHS MISSION

1

Here is a 3D shape.

Complete this table about the shape.

Number of faces	Number of vertices	Number of edges

2 marks

2

Hari thinks of a 3D shape.

He says,

It has 15 edges.

It has 7 faces.

Two of its opposite faces each have 5 edges.

Which 3D shape is he thinking of?

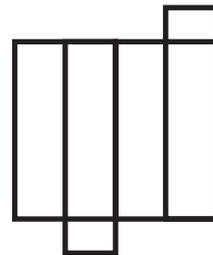

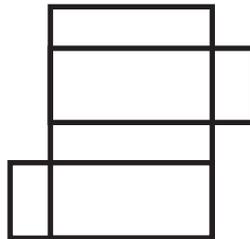

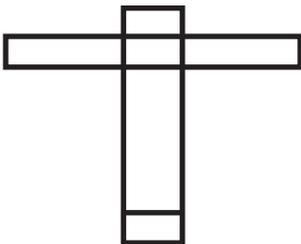

1 mark

3

Look at these diagrams.

Put a tick (✓) if it **is** the net **of** a cuboid.

Put a cross (✗) if it is **not**.

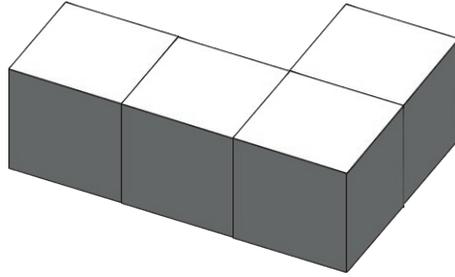

2 marks

4

Amrit has four cubes. She sticks them together to make this shape.

She paints the sides grey all the way around the shape. She leaves the top and bottom white.

How many cubes have only **two** faces painted grey?

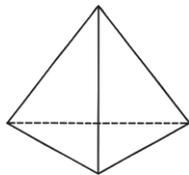

1 mark

5

Zeke has two **tetrahedrons** that are the same size.

He sticks them together to make a new 3D shape.

How many **faces** and **edges** does the **new** 3D shape have?

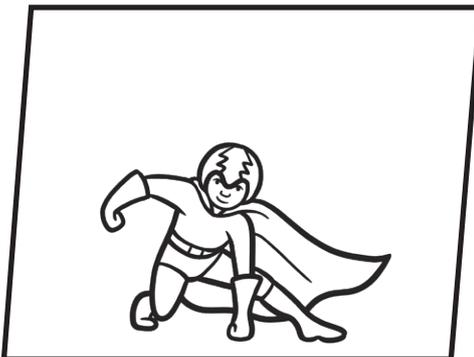

and

REFLECTION AND TRANSLATION

SUPERCARGE!

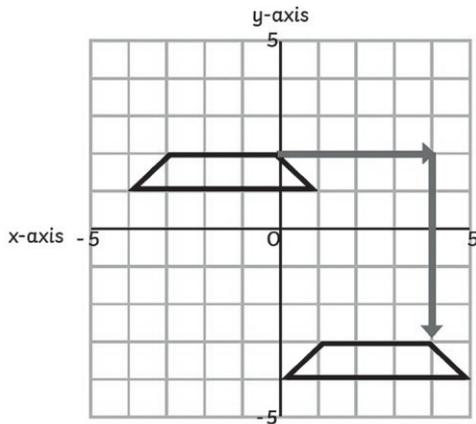

SCORE: /2

Find the coordinates needed to complete the symmetrical shape.

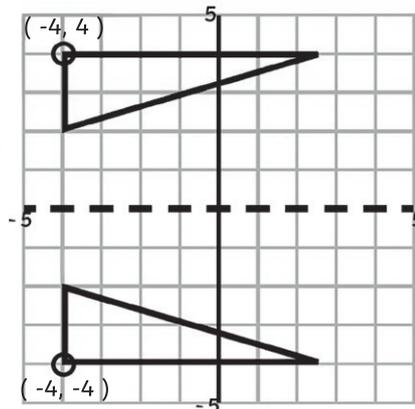

Answers: a) (8,7) b) (4,2) and (8,2)

BOOST YOUR SUPERPOWERS

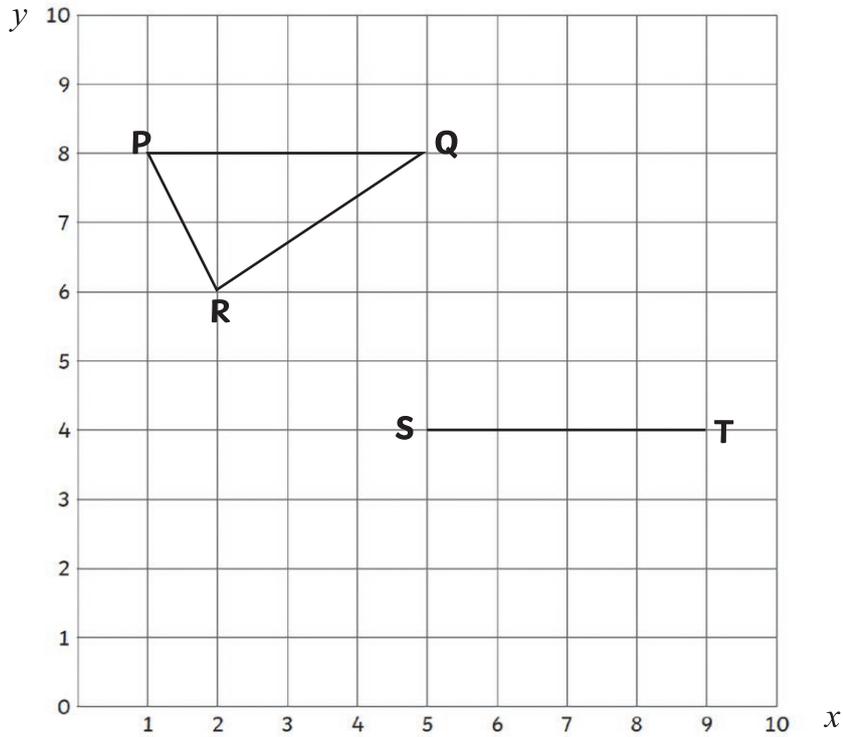

Translations can **move** a coordinate point horizontally, vertically or both. If a polygon is being translated, every point must be translated in the same direction to ensure that the shape doesn't change.

Coordinate positions can be **reflected** on a coordinate grid. Reflection flips a shape over a mirror line. The **mirror line** may be on the x -axis, the y -axis or it may be a dashed, straight line shown anywhere on the coordinate grid.

1

Joseph has drawn triangle PQR on this grid.

Jia has started to draw an identical triangle STU.

What will be the coordinates of point U?

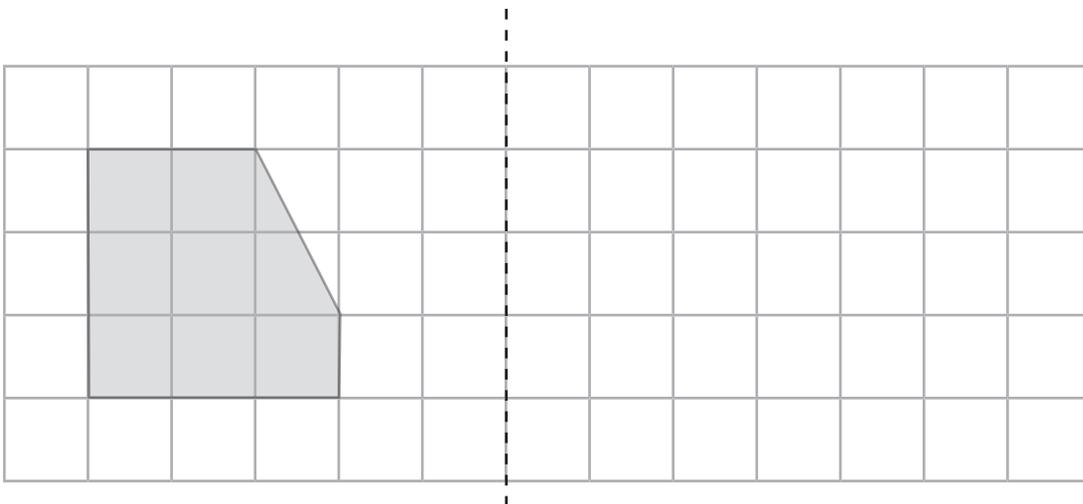

1 mark

2

Here is a shaded shape on a square grid.

Reflect the shape in the mirror line using a ruler.

1 mark

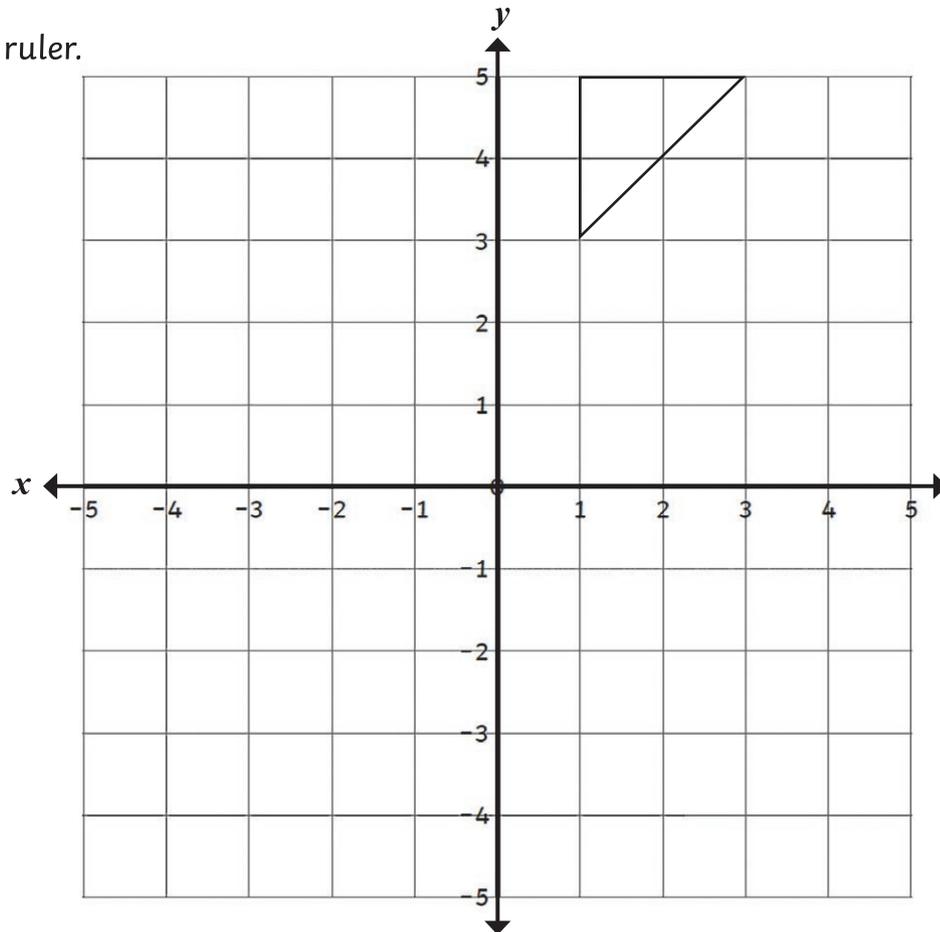

3

The triangle is to be transformed on the grid below as follows:

- First **translate** the shape 8 down. Label this triangle A.
- Then **reflect** the translated triangle on in the y -axis. Label this triangle B.

Draw the new triangle on the grid **after each** transformation.

Use a ruler.

Solve the word problems.

- a) Zeke starts school at 8 a.m. He takes two buses. His first bus takes 30 minutes. His second bus takes twice the time that the first bus takes. He then has to walk for 7 minutes.

What time should Zeke set off to arrive on time?

:

- b) A train was due to arrive at the station at 16:45

It is running 37 minutes late.

What time is the train expected to arrive?

:

Answers: a) 06:23 or 6:23 a.m. b) 17:22 or 5:22 p.m.

BOOST YOUR SUPERPOWERS

Tables are used to record information and collect results.

Horizontal lines of data are called rows. Vertical lines of data are called columns.

Pictograms use symbols to represent data. The key tells you the value of each symbol.

Two-way tables contain multiple pieces of information in one table. There is usually a total column and a total row.

Timetables show a list of chronologically ordered events and can be used to compare the timings of different events. Most timetables include start and finish times so they can be used to calculate durations.

The **x-axis** (the horizontal line) tells us the different **categories** of **sandwiches**. The **y-axis** (the vertical line) tells us the number of children (frequency). The **scale** is labelled in **intervals** of 2.

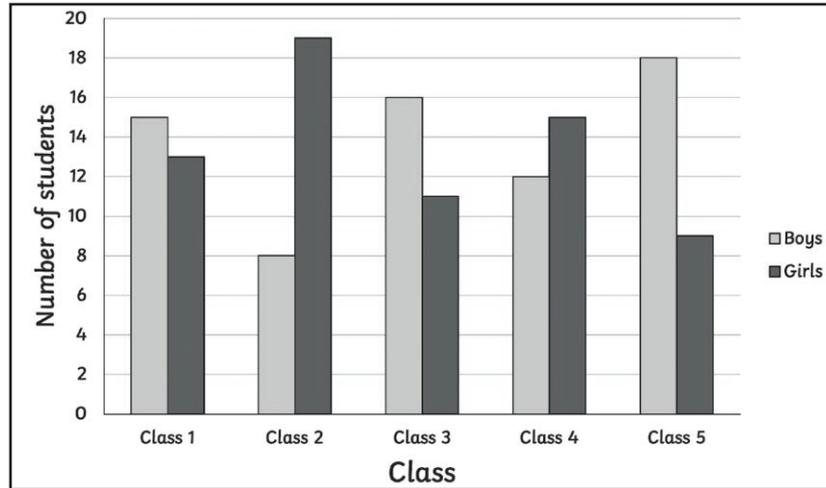

Some questions will ask us to interpret how many of each data set there are. For example, how many children prefer egg mayo sandwiches?

First, we find 'egg mayo' along the x-axis and follow the bar up along the y-axis to find the frequency. The bar lies between 4 and 6; therefore, there are 5 votes for egg mayo sandwiches.

1

This bar chart shows the number of students who attend Maths Hero training.

a) How many more boys are there in Class 5 than in Class 1?

boys

1 mark

Line graphs are used to show changes to a measurement over time. They present **continuous data**.

In this line graph, the horizontal axis (the **x-axis**) shows us the time the data is being measured over.

The vertical axis (the **y-axis**) shows the temperature in degrees celsius (°C).

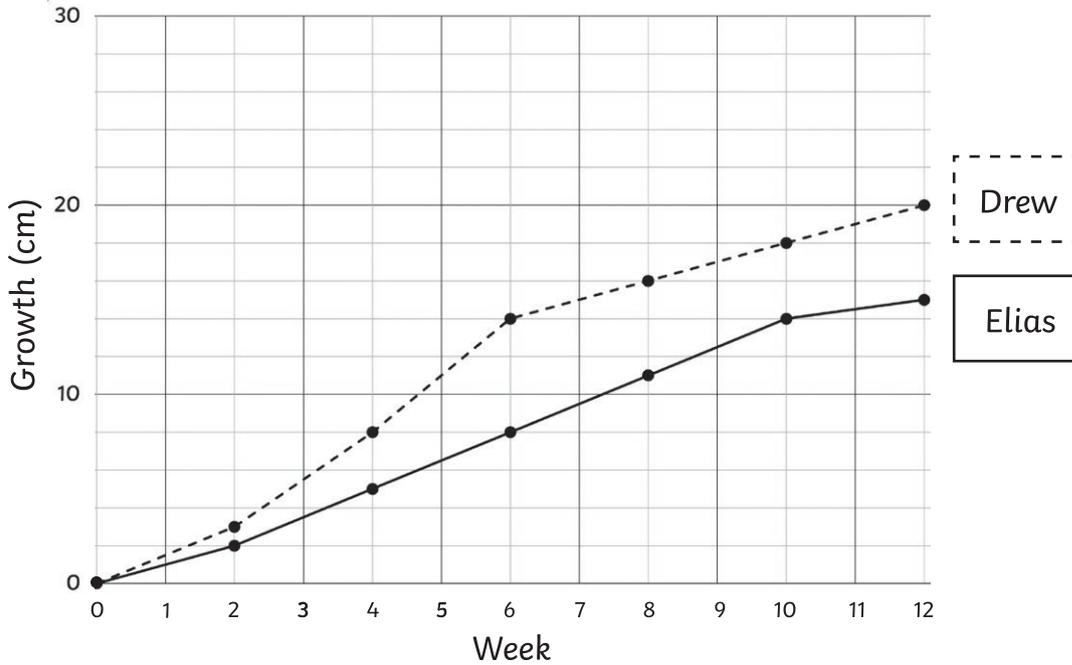

Data is **plotted** on a line graph with **data plots**. These data plots are then **joined** one

by one using straight lines. We can use the line of the graph to describe **trends** or to find precise measurements.

1

This line graph shows the growth of Drew and Elias' sunflowers over 12 weeks.

a) What is the difference in size between Drew and Elias' sunflowers at 8 weeks?

 cm

b) Estimate the size of Drew's sunflower at 5 weeks.

 cm

c) Elias says,

The greatest growth of my sunflower, over **two weeks**, was between weeks 10 and 12.

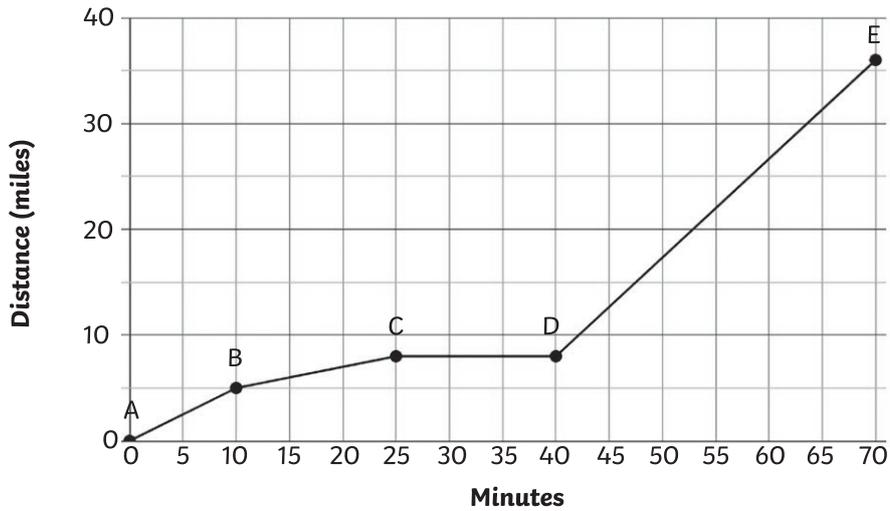

Explain why he is **not correct**.

2

This line graph shows a car's journey.

Match each part of the journey to the correct sentence.

A to B

The car travels a large distance in a short amount of time on the motorway.

B to C

The car travels 5 miles in 10 minutes.

C to D

The car travels 3 miles in 15 minutes because of traffic.

D to E

The driver of the car stops for a break.

b) 4, 9, 4, 7, 6

c) 1, 2, 7, 6

d) 3, 1, 8, 8, 5

e) 7, 10, 6, 5, 7, 7

Answers: a) 8 b) 6 c) 4 d) 5 e) 7

BOOST YOUR SUPERPOWERS

Finding the mean involves calculating the **average** value of a set of data. First, we **add** together all of the values and then **divide** this by the **number of values** there are in the data set. The mean will not always be a whole number.

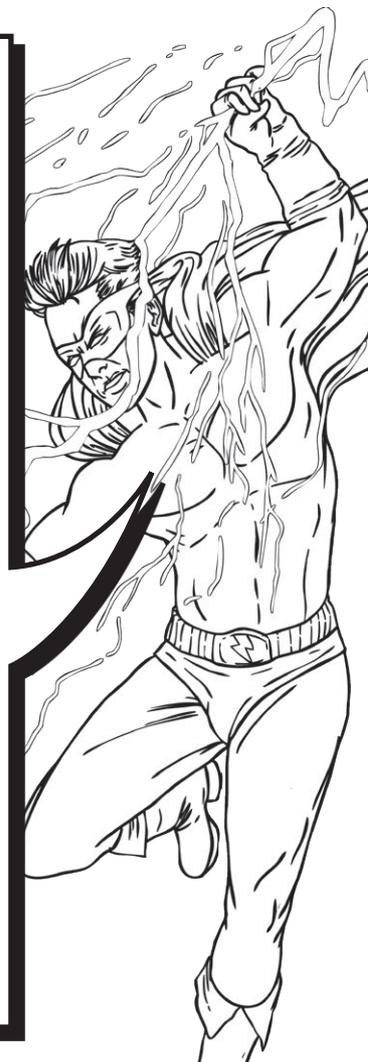

Day	Mon	Tue	Wed	Thu	Fri
Bird	12	7	14	11	9

Finding the mean:

1) $12 + 7 + 14 + 11 + 9 = 53$

2) $53 \div 5 = 10.6$

In this example about bird watching, we can round the answer to the **nearest whole number** (11) as you cannot have part of a bird.

3

Emily rides her bike for charity over five days.

The table shows how far she cycled each day.

Monday	Tuesday	Wednesday	Thursday	Friday

RECHARGE

Complete the multiplication calculations and shade each section with the matching colour.

White	Bright blue	Light blue	Red	Yellow	Purple	Skin colour (of your choice)
0 - 20	21 - 40	41- 60	61- 80	81- 100	101 - 120	121 - 150

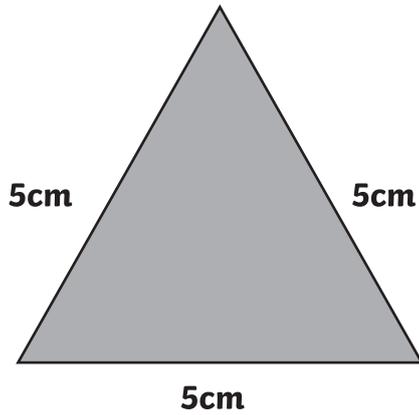

PERIMETER

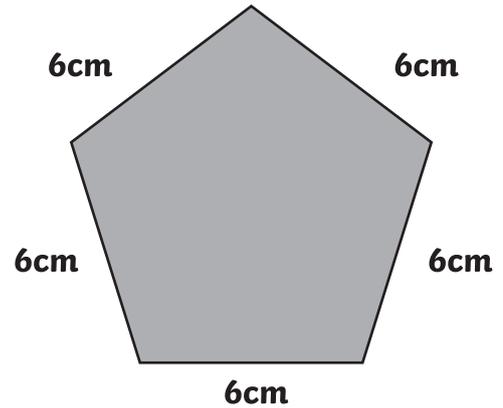

Perimeter is the **distance** around the edge of a shape.

To calculate the perimeter of a shape, **add** the **lengths** of all the sides.

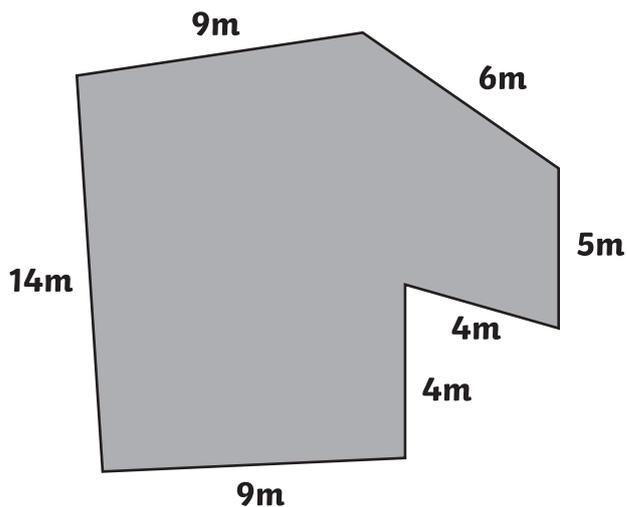

Shapes Not drawn to scale

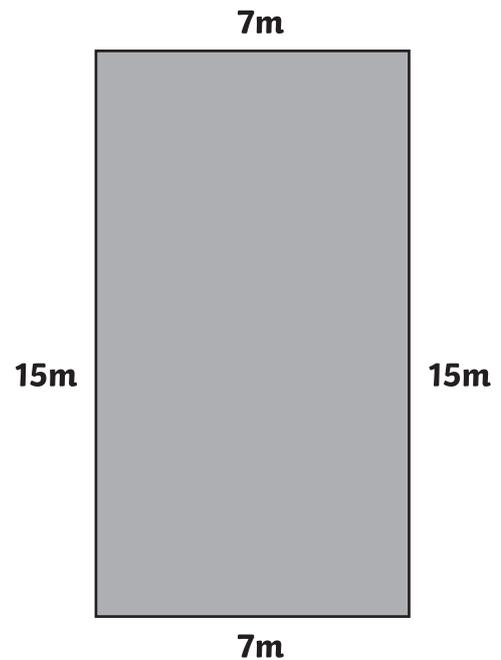

$$5 + 5 + 5 = 15\text{cm}$$

$$6 + 6 + 6 + 6 + 6 = 30\text{cm}$$

$$14 + 9 + 6 + 5 + 4 + 4 + 9 = 51\text{m}$$

$$15 + 7 + 15 + 7 = 44\text{m}$$

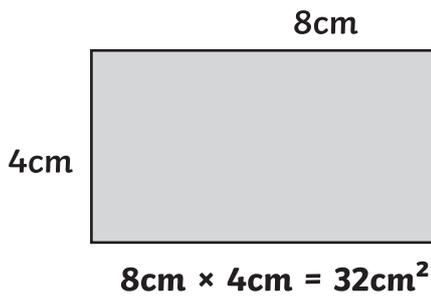

AREA

Area is the amount of square units inside a shape.

To calculate the area, we need to use different methods depending on the shape.

length \times width = area of a rectilinear shape

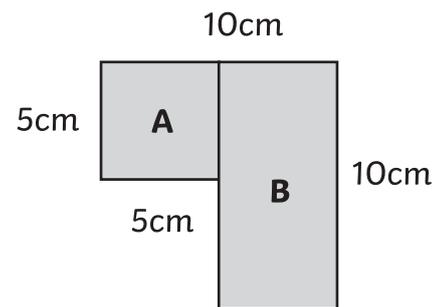

Shapes Not drawn to scale

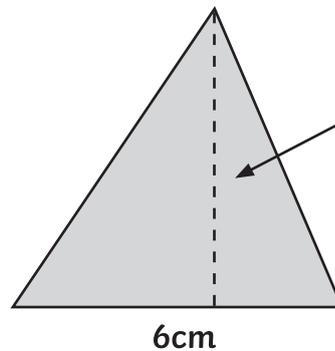

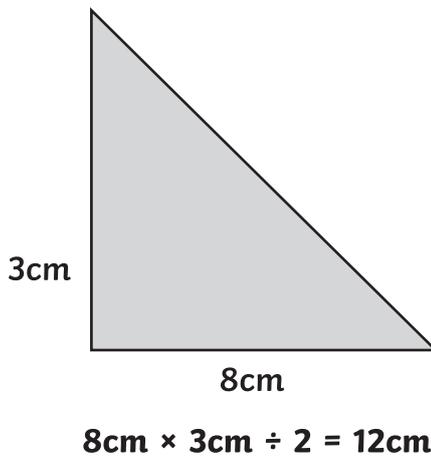

A) $5\text{cm} \times 5\text{cm} = 25\text{cm}^2$

B) $5\text{cm} \times 10\text{cm} = 50\text{cm}^2$

$25\text{cm}^2 + 50\text{cm}^2 = 75\text{cm}^2$

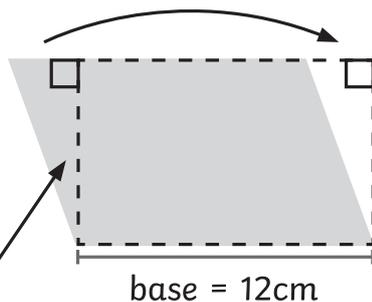

base \times perpendicular height \div 2 = area of a triangle

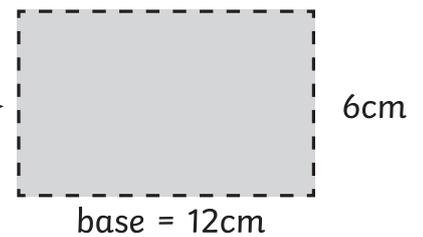

perpendicular height = 5cm

$6\text{cm} \times 5\text{cm} \div 2 = 15\text{cm}^2$

base \times perpendicular height = area of a parallelogram

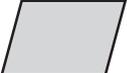

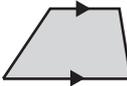

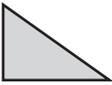

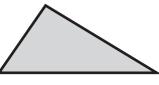

perpendicular height = 6cm

$12\text{cm} \times 6\text{cm} = 72\text{cm}^2$

scalene

All sides are different

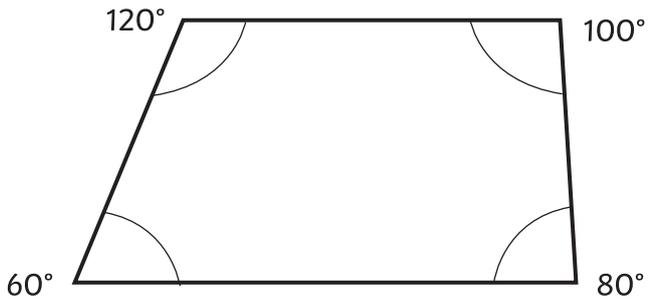

All angles are different

$$a + b + c = 180^\circ$$

FINDING ANGLES AND LENGTHS IN QUADRILATERALS

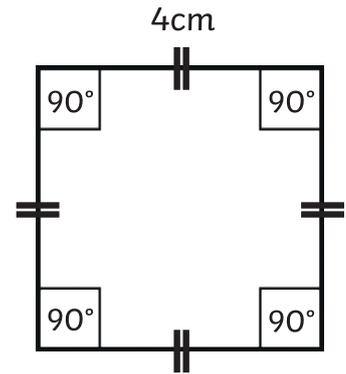

The **interior angles** of quadrilaterals equal 360°

Irregular Trapezium

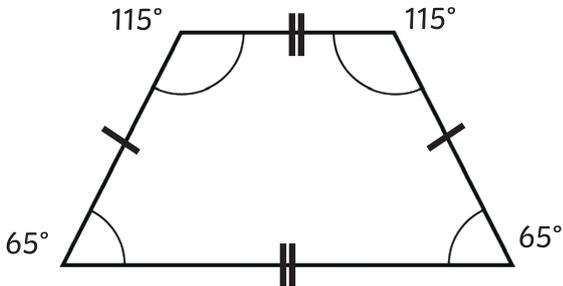

Shapes not drawn to scale

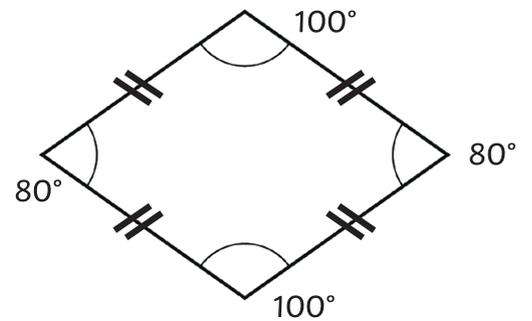

Square

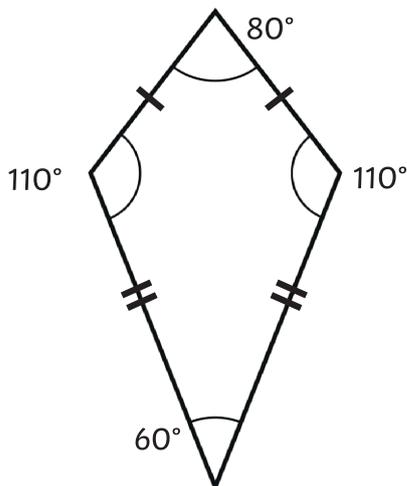

Isosceles Trapezium

Rhombus

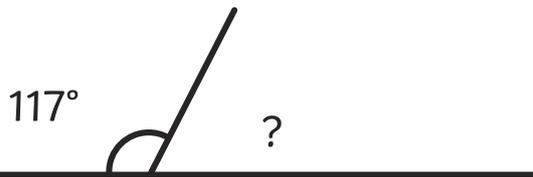

Kite

FINDING MISSING ANGLES

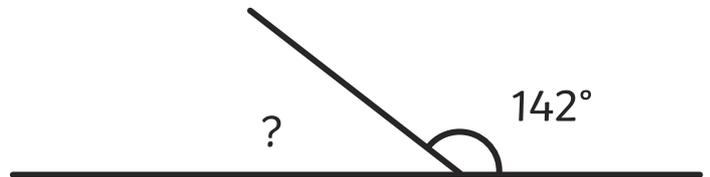

Shapes not drawn to scale

Angles on a straight line always add up to 180°

$$180^\circ - 117^\circ = 63^\circ$$

The missing angle is 63°

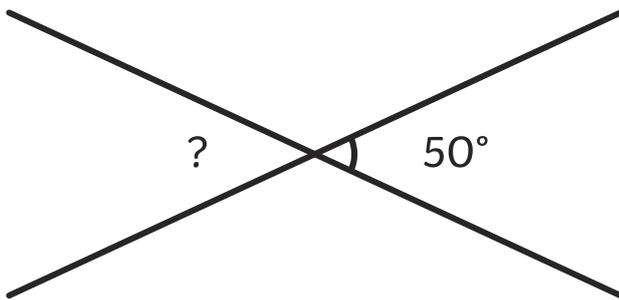

$$180^\circ - 142^\circ = 38^\circ$$

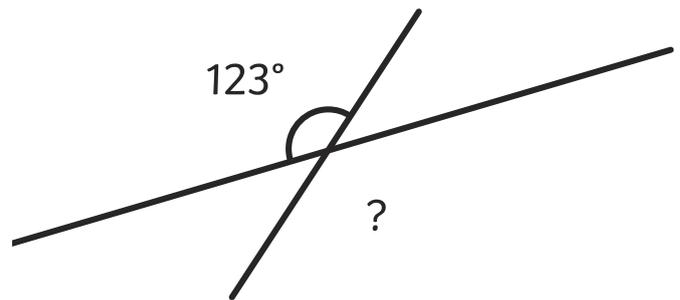

The missing angle is 38°

Missing vertically opposite angles

Opposite angles are equal

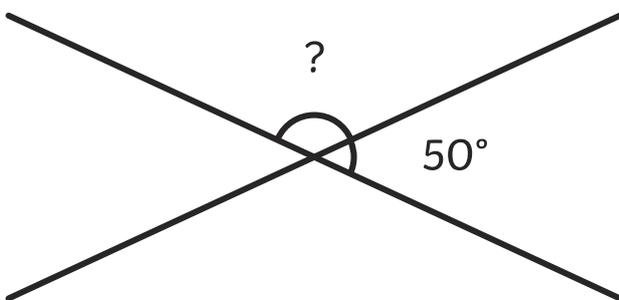

The missing angle is 50°

The missing angle is 123°

Angles around a point total 360°

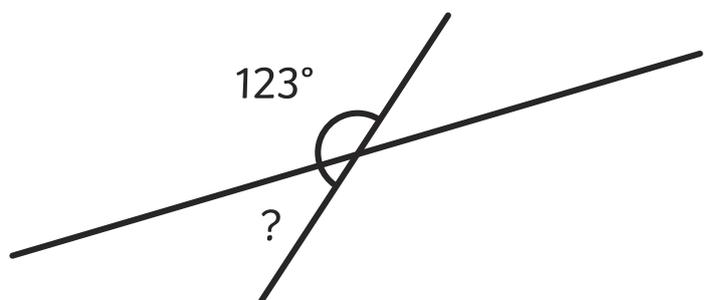

The two known opposite angles total 100°

$$360^\circ - 100^\circ = 260^\circ$$

$$260^\circ \div 2 = 130^\circ$$

The missing angle is 130°

The two known opposite angles total 246°

$$360^\circ - 246^\circ = 114^\circ$$

$$114^\circ \div 2 = 57^\circ$$

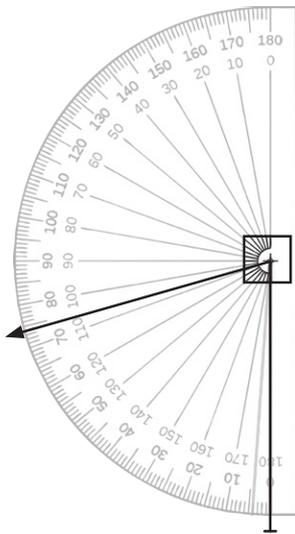

The missing angle is 57° .

HOW TO USE A PROTRACTOR

Follow these steps to make sure you are using your protractor to measure angles accurately.

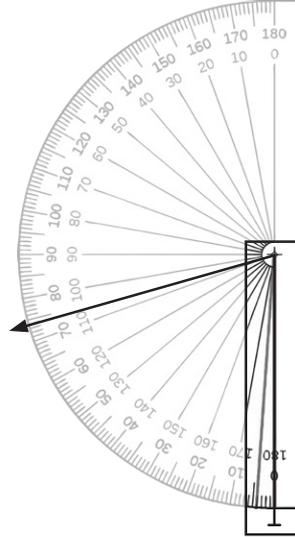

Step 1

Put the cross or circle at the point (vertex) of the angle that you are measuring.

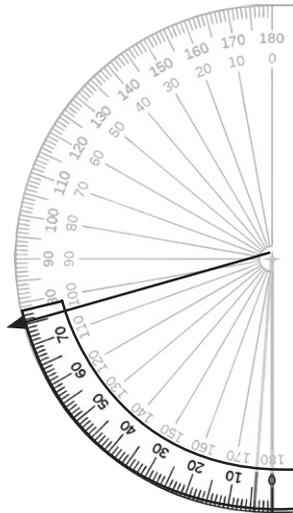

Step 2

Line up one of the sides that forms the angle with the zero on the outer edge of the protractor.

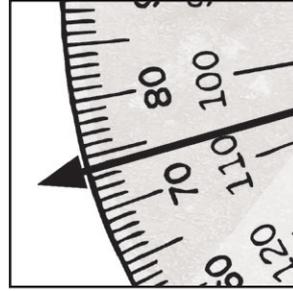

Step 3

Read around the outer scale of the protractor from the zero to where the other side meets the edge of the protractor.

Step 4

Count the degrees lines carefully to get an accurate measurement.

Helpful hint:

Use what you already know about angles to estimate the size of the angle you are measuring. Ask yourself: is it bigger than a right angle or smaller than a right angle? Then, check your measurement - is it a logical answer?

TYPES OF LINES

Vertical

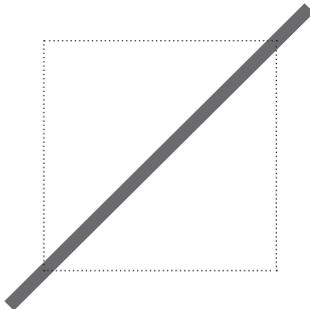

Straight line up and down

Horizontal

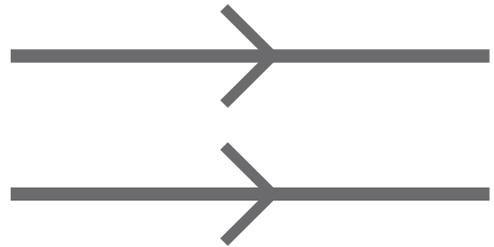

Straight line left and right

Diagonal

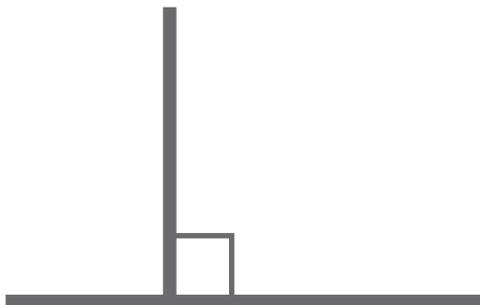

Straight line corner to corner

Parallel

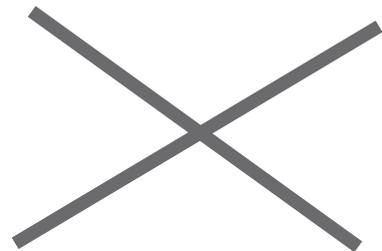

Lines that will never meet and are always the same distance apart

Perpendicular

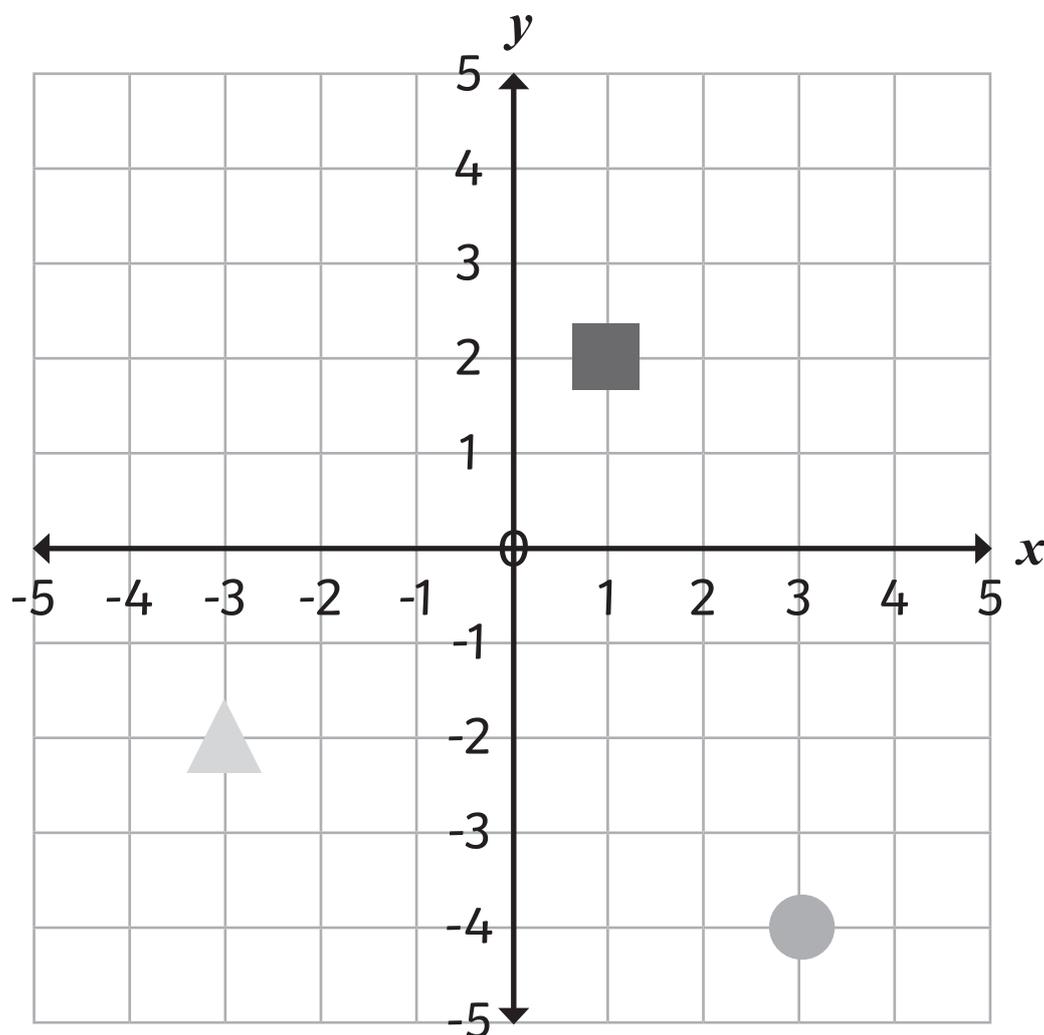

Lines that meet at a right angle (90°)

Intersecting Lines

Lines that cross but do not make a right angle

COORDINATES

● = (3, -4) ■ = (1, 2) ▲ = (-3, -2)

Coordinates can use **positive** and **negative** numbers. Whether positive or negative, always write the **x-axis** coordinate **followed by** the **y-axis** coordinate.

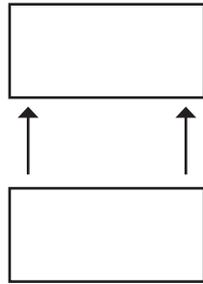

Look at the circle point. It is 3 squares along and 4 down.
We write this coordinate as (3, -4).

REFLECTION AND TRANSLATION

Translate / Translation

A shape is translated when it is moved without rotating or resizing.

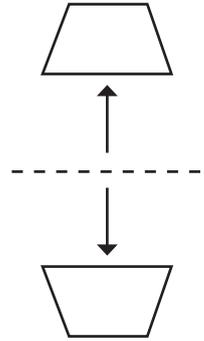

Each point of the shape moves the same distance in the same direction.

Reflect / Reflection

A shape is reflected when it is flipped over a mirror line.

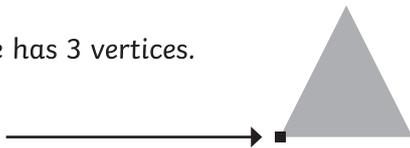

Every point of the shape is the same distance from the mirror line as the same point on the reflected shape.

Vertex / Vertices

The corner of a shape is called a vertex. The plural is vertices.

A triangle has 3 vertices.

Coordinates

Coordinates mark the location of a point on a coordinate grid.

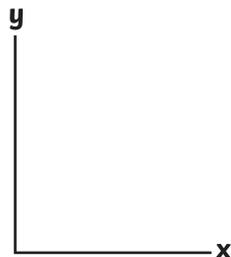

The coordinates are written in brackets (x, y).

Axis / Axes

A coordinate grid has axes.

The x-axis is horizontal.

The y-axis is vertical.

Point

A point is an exact location.

It has no size, only position. They are shown by dots or parts of a line.
