

Year 5
Summer Term 2 Homework Project
Living Things and Their Habitats

The project this half term aims to provide opportunities for your child to learn more about living things specifically their life cycles.

I would like you to use materials that you have at home to make one of the following:

Activities may include:

Making a butterfly feeder

Creating an insect garden

Life cycle quiz hunt

Modelling seed dispersal and insect pollination

Or create your own idea as long as it is related to life cycles.

I look forward to seeing your amazing projects by Monday 13th July 2026.
