

# materials

Materials are what things are made from.

# strong

A **strong material** is a material that **does not break, tear, or bend easily**

# soft

A **soft material** is a material that is **easy to press, squeeze, or change shape**.

It does not feel hard and gives way when you touch it.

# waterproof

A **waterproof material** is a material that **does not let water pass through it**.

Water stays on the surface and does not soak in.

# shiny

A **shiny material** is a material that **reflects light**.

When light hits it, it looks bright and sometimes you can see a bit of a reflection.

# dull

A **dull material** is a material that **does not shine or reflect light**.

It looks plain, not bright, and light does not bounce off its surface.
