## YR4 MULTIPLICATION AND DIVISION KNOWLEDGE ORGANISER

Key Concepts

- Recall multiplication and division facts for multiplication tables up to $12 \times 12$.
- Multiply together three numbers
- Multiply two-digit and three-digit numbers by a one-digit number using formal written layout.
- Divide two-digit and three-digit numbers by a one-digit number.

## Key Vocabulary

- multiply/multiplication
- divide/division
- calculate/calculation
- mental calculation
- written method
- operation
- remainder
- factor/factor pairs
- efficient
- exchange
- commutative law

Multiplication Tables

| $1 \times 6=6$ | $2 \times 6=12$ | $3 \times 6=18$ | $4 \times 6=24$ | $5 \times 6=30$ | $6 \times 6=36$ |

Related Facts from Times Tables

| $3 \times 6=18$ | $6 \times 3=18$ |
| :---: | :---: |
| $18 \div 3=6$ | $18 \div 6=3$ |
| $30 \times 6=180$ | $60 \times 3=180$ |
| $180 \div 30=6$ | $180 \div 60=3$ |

## Multiply Three Numbers

$4 \times 3 \times 6=72$
"I would solve this by multiplying 4 by 3 , which is 12 . Then, 1 multiply 12 by 6 , which is 72 .'
"Because multiplication is commutative, you can multiply the numbers in any order and you will get the same answer.

| $4 \times 3 \times 6=72$ | $3 \times 6 \times 4=72$ |
| :--- | :--- |
| $4 \times 6 \times 3=72$ | $6 \times 4 \times 3=72$ |
| $3 \times 4 \times 6=72$ | $6 \times 3 \times 4=72$ |

## YR4 MULTIPLICATION AND DIVISION KNOWLEDGE ORGANISER

Multiplication - Formal Written Method
Pupils begin by using place value counters to understand written multiplication:

Pupils transfer this understanding to a formal written method.

Multiply each digit from the 3 digit number by the 1 digit number, starting with the ones. $4 \times 3=12$. Twelve ones cannot go in the ones column so exchange ten ones for one ten and place it into the tens column. Keep the 2 ones in the ones column. Then, multiply the tens digit by 3. The extra ten must be added; there are now 7 tens altogether. Finally, multiply the hundreds digit by 3 and put the answer in the hundreds column - 3 hundreds. The answer is 372 .

## Division - Formal Written Method

Pupils begin by using place value counters to understand written division:

Start with the hundreds column. As the 100 counter cannot be split into groups of 6 , exchange it for 10 lots of 10 and put these counters into the tens column.

Then, put the 10s counters into as many equal groups of 6 as possible. We can now see that there are two groups of 6 tens. Next, put the ones counters into groups of 6 . There is 1 group of 6 in total, making the answer 21.

Pupils transfer this understanding to a formal written method.

Start by looking at how many groups of 6 you can make with 1 hundred. You cannot make any complete groups of 6 so place a zero in the hundreds column. Then, exchange the 1 hundred for 10 tens so there are now 12 tens.

You can make two groups of 6 tens using 12 tens. Therefore, place 2 in the tens column.

|  | 0 | 2 | 1 |
| :--- | :--- | :--- | :--- |
| 6 | 1 | ${ }^{\prime}$ | 2 |

Finally, look at the ones digit. With 6 ones, you can make 1 group of 6 ones. This means that a 1 is placed in the ones column. The answer is 21 .
