EYFS Knowledge Organiser The World Around Usi

Autumn is a season the months are; September, October, November.

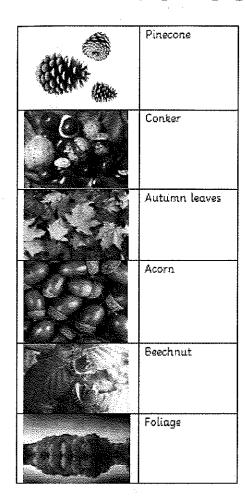

Deciduous trees loose their leaves. Evergreen trees keep their leaves.

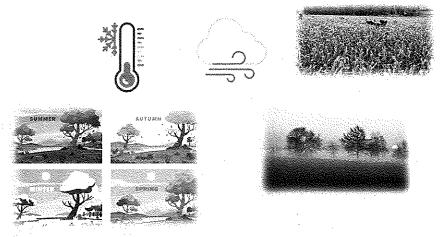

Autumn treasures include; conkers, acorns, beechnuts, cones, foliage, breeze. Leaves change colour from green to red, yellow, orange or brown.

Weather changes include; temperature, wind, fog, frost.

Seasons	A year is split into four parts. As the season changes, the weather changes too.
Autumn	A season in which the weather gets cooler, and it gets darker earlier.
Harvest	To gather crops. Crops are plants that we use to make food.
Harvest Festival	Harvest Festival is celebrated to give thanks for the crops that the farmers have worked hard to grow
Farmer	The person that grows our food and cares for animals on a farm.
Combine harvester	A machine to gather wheat (a type of crop.)
Darker	When there is less light.
Bare	When the leaves fall off the trees, there are no leaves left on them. The tree is bare.
Hibernate	When an animal or plant sleeps through the winter.
Diwali	A five-day festival celebrated by Hindus.
The festival of light	This is another name given to Diwali
Hindu	People that follow the religion Hinduism.
India	A country in Asia.
Bonfire Night	A celebration observed on 5 November in the UK.

Why Do Leaves Change Colour in the Autumn? In the spring and summer, the leaves contain something called chlorophyll. Chlorophyll helps the tree to make food. It also gives the leaves a green colour. In the autumn and winter, there is less daylight so the tree stops making food and there is less chlorophyll in the leaves. The green colour fades and other colours such as yellow, orange, red and purple show through.
