

## Computing Intent and Implementation

At Cavendish Close Junior Academy, we aim to deliver a curriculum that helps children to **Aspire, Collaborate and Experience** a variety of opportunities.

### Intent

1.	Use technology safely and responsibly
2.	Be confident and creative ICT users
3.	To design, write and debug programs
4.	Collaborate and communicate online
5.	Apply computing across the curriculum

### Intent explanation

1.	It is our intention that all children use technology safely, respectfully and responsibly, that they recognise acceptable/unacceptable behaviour; and know how and when to report concerns.
2.	It is our intention that all children are responsible, competent, confident and creative users of information and communication technology through carefully planned and sequenced lessons.
3.	It is our intention that all children have the opportunity to design, write and debug programs to accomplish specific goals. That they learn through solving problems and develop their logical reasoning through carefully sequenced lessons.
4.	It is our intention that all children can collaborate and communicate through computer networks and to experience the opportunities that this provides.
5.	It is our intention that children have the opportunity to incorporate computing into the wider curriculum and aspire to develop their understanding analysis and evaluation techniques.

### Skills progression

Skill	Year 3 and 4	Year 5 and 6
Digital literacy	<p>Children will build on their digital literacy skills throughout their time in Lower Key Stage 2. Children will be given their own 1:1 device as part of the Harmony Trust, Great Place To Learn (GP2L) initiative. Children will explore how this allows them to:</p> <ul style="list-style-type: none"><li>• use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content</li><li>• use technology safely, respectfully and responsibly; recognise acceptable/unacceptable behaviour; identify a range of ways to report concerns about content and contact.</li></ul>	<p>Children will continue to develop their digital literacy skills, building on the skills and prior knowledge that they have acquired throughout their learning journey. Children will explore how to understand computer networks including the internet; how they can provide multiple services, such as the world wide web; and the opportunities they offer for communication and collaboration.</p>
Information technology	<p>Children will continue to build upon their Information Technology skills during their time in LKS2. Within units such as Branching Databases, children will have the opportunity to develop their data analysing and presenting skills. By the end of LKS2 children will be able to evaluate and apply their knowledge of information technology, including using new or unfamiliar technologies (such as Micro:Bits) analytically to solve problems.</p>	<p>By the end of KS2 children will be able to articulate their understanding of a range of data and the ways that this can be represented. Through units such as Flat File Databases and Spreadsheets, children will be able to confidently select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information.</p>
Computer Science	<p>Children will continue to develop their knowledge of Computer Science during LKS2. Through units using Micro:Bits and other coding programmes, children will have the opportunity to</p>	<p>By the end of KS2, children will be equipped to use computational thinking and creativity to understand and change the world. Throughout their learning, they will have had the opportunity to</p>

Our ACE Curriculum

**Aspire★Collaborate★Experience**

**THE HARMONY TRUST**

BELIEVE • ACHIEVE • SUCCEED

	<p>develop their skills by designing, writing and debugging programs that accomplish specific goals, including controlling or simulating physical systems. Children will continue to explore a range of variables to ensure that they can understand and apply the fundamental principles and concepts of computer science, including abstraction, logic and algorithms.</p>	<p>explore the deep links that Computing has with mathematics, science and design and technology. Children will know that the core of Computing is Computer Science, in which they will have been taught that the principles of information and computation, how digital systems work, and how to put this knowledge to use through programming. Through their knowledge of Computer Science, children will be prepared to:</p> <ul style="list-style-type: none"><li>• solve problems by decomposing them into smaller parts, use sequence, selection, and repetition in programs; work with variables and various forms of input and output.</li><li>• use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs</li></ul>

Our ACE Curriculum

**Aspire★Collaborate★Experience**

	6. To follow an algorithm accurately to create a digital number flashcard 7. To write and debug programs that meets design criteria	count-controlled loops to create repeated shapes. 4. To learn how to predict, modify, and apply count-controlled loops to produce different shapes by changing loop values. 5. To learn how to decompose tasks into smaller steps and use reusable procedures in programs to simplify coding. 6. To learn how to design, write, and debug a program that uses count-controlled loops to create a patterned design.	4. Use secure keyboard knowledge to type a paragraph accurately, including letters, numbers, and punctuation. 5. Apply keyboard skills to type a paragraph accurately and efficiently, maintaining correct finger positioning. 6. Demonstrate secure keyboard knowledge by typing a paragraph accurately and with improved speed.	are, use tinkering to find inputs on the BBC micro:bit, and represent selection with inputs using decision boxes. 4. To plan, write, test, and debug programs that use selection, inputs, and outputs effectively.
<b>Key Vocabulary</b>	Algorithm, program, code, sequence, debug, input, output, micro:bit, led, accelerometer, gesture, delay, pattern, abstraction, predict, evaluate, block, editor, download, run	Algorithm, code snippet, command, debug, loop, count-controlled loop, repeat, procedure, decomposition, logo, turtle, fd (forward), rt (right turn), lt (left turn), to	Keyboard, keys, letters, punctuation, typing, accuracy, speed, paragraph, word wrap, space bar, shift key, enter key, backspace, finger placement, home row, table, document, formatting	Debug, algorithm, code, test, run, led, output, input, sensor, less, else, command, simulation, variables

### How each intention is met across units of work

<b>Intention 1:</b> Use technology safely and responsibly.			
<b>Year 3</b>	<b>Year 4</b>	<b>Year 5</b>	<b>Year 6</b>
Children will set up fingerprint recognition Children will set passcodes. Children will understand their responsibilities using their iPad Children will learn what the acronyms THINK and SMART mean.	Children will recap the acronyms THINK and SMART Children will recognise when someone is causing harm online Children will be able to offer advice to the victims of online harm Children will practise privacy and password hygiene, and offer appropriate advice to others.	Children will remind themselves about the SMART and THINK acronyms. Children will understand what cyber-crime is. Children will know the legal boundaries online. Children will know that poor choices online can affect your adult life. Children will know where you can have safe fun – hacking it legal. Children will understand the key points of the computer misuse act 1990. Children will understand what cybercrime is and the legal boundaries online (Computer Misuse Act basics), know the long-	Children will remind themselves about the SMART and THINK acronyms. Children will understand what cyber-crime is. Children will know the legal boundaries online. Children will know that poor choices online can affect your adult life. Children will know where you can have safe fun – hacking it legal. Children will understand the key points of the computer misuse act 1990. Children will consolidate digital rights and responsibilities, evaluate reliability and bias online, act responsibly on networks, and use

		term impact of poor choices on digital reputation, and identify safe, legal ways to explore computing.	clear reporting routes when needed.
--	--	--	-------------------------------------

**Intention 2:**

Be confident and creative ICT users.

Year 3	Year 4	Year 5	Year 6
<p>Children will understand their responsibilities when using their iPad.</p> <p>Children will learn what the acronyms THINK and SMART mean.</p> <p>Children will create and debug a branching database for a purpose.</p> <p>Children will design and create a simple maze-based challenge using Scratch.</p> <p>Children will plan, run, test and debug programs confidently, using click events, timers and repeat commands.</p> <p>Children will create and debug a branching database for a purpose and use their 1:1 iPad responsibly to support learning across subjects.</p>	<p>Children will compose electronic music using Busy Beats/2Sequence.</p> <p>Children will develop confidence with Micro:bit projects using sensors, variables and logic.</p> <p>Children will create programs that include IF and IF/ELSE statements.</p> <p>Children will use variables and plan algorithms before coding.</p> <p>Children will collaborate to debug and refine programs.</p> <p>Children will compose electronic music using Busy Beats/2Sequence and develop confidence with micro:bit projects using sensors, variables and logic.</p>	<p>Children will design, query and present information using flat-file databases.</p> <p>Children will create well-formatted Word documents using tables and templates.</p> <p>Children will program Micro:bit projects such as temperature sensors, Magic 8 Ball and football simulations using events, selection and variables.</p> <p>Children will apply decomposition and flowcharts to plan and debug programs.</p> <p>Children will design, query and present information with flat-file databases and create well-formatted Word documents using tables and templates.</p>	<p>Children will select and combine tools effectively, using spreadsheets to model, calculate and present data.</p> <p>Children will create graphs and charts to represent data visually.</p> <p>Children will understand and use network services for collaboration.</p> <p>Children will engineer robust programs using loops, functions, and multiple inputs/outputs, testing systematically and correcting errors.</p> <p>Children will select and combine tools effectively, using spreadsheets to model, calculate and present data, and understand network services to collaborate.</p>

<b>Intention 3:</b> Design, write and debug programs			
<b>Year 3</b>	<b>Year 4</b>	<b>Year 5</b>	<b>Year 6</b>
Children will program in Scratch using events and repetition. Will know: sprite, event, sequence, repetition, timer; what a bug is. Children will design a maze challenge, use click events, timer-after/every; repeat blocks; test and debug. Children can improve program flow; explain changes using clear reasoning. Children will complete a working maze projects; annotated code; bug-fix logs.	Children will create Micro:bit programs (step counter, light-trigger switch, rock-paper-scissors, dice) using inputs, random numbers, variables and selection. Children will write Logo programs with loops and reusable procedures to draw shapes/letters/patterns. Children will select when to use loops vs. selection for efficient solutions. Children will document and communicate debugging steps and improvements.	Children will prototype purposeful Micro:bit solutions (temperature display, Magic 8 Ball, football simulation) using events, selection and variables. Children will decompose problems and use flowcharts/pseudocode to plan solutions. Children will test against success criteria and refine accuracy, usability and efficiency. Children will evaluate trade-offs (complexity vs. clarity; speed vs. readability).  Children will prototype purposeful micro:bit solutions (temperature sensor, Magic 8 Ball, football simulation) using events, selection and variables, applying decomposition and flowcharts.	Children will engineer robust programs with multiple inputs/outputs, using selection, count/condition loops and functions. Children will build timers/counters and refactor code into functions for reuse and clarity. Children will test systematically (test tables, edge cases) and correct errors. Children will explain and justify algorithmic choices using logical reasoning. Children can use a spreadsheet to solve a problem. Children know that there are ways to represent their data graphically and that spreadsheets can make the process of representing data easier. Children will apply all new spreadsheet skills to solving problems and presenting data.

<b>Intention 4:</b> Collaborate and communicate online (Networks).			
<b>Year 3</b>	<b>Year 4</b>	<b>Year 5</b>	<b>Year 6</b>
<p>Children will contribute to class branching databases and respect others' inputs.</p> <p>Children will use YES/NO classification games with peers to communicate ideas clearly.</p> <p>Children will practise safe communication via guided blog posts (moderated sharing).</p> <p>Children will follow SMART when commenting, sharing and collaborating online.</p>	<p>To be able to offer advice to the victims of online harm.</p> <p>Children will collaborate on musical compositions, dividing roles fairly and combining tracks.</p> <p>Children will share algorithms and peer-debug Micro:bit code, explaining changes and rationale.</p> <p>Children will give and receive constructive feedback to improve shared outcomes.</p> <p>Children will keep shared resources organised (naming, version notes).</p> <p>Children will collaborate on musical compositions, share algorithms and peer-debug micro:bit code, explaining changes to others.</p>	<p>Children will co-author databases and Word documents, using tables and hyperlinks to communicate findings.</p> <p>Children will apply consistent styles and layouts so shared documents are clear and accessible.</p> <p>Children will tailor communication for a real audience.</p> <p>Children will use collaborative features responsibly (track changes, comments).</p> <p>To contribute to a class database.</p> <p>Children can code a story telling game using a 'when gesture' event, random numbers, variables and logic IF/THEN commands.</p> <p>Children will work together via shared databases and Word documents, using tables and hyperlinks to communicate findings to an audience.</p>	<p>Children make a variety of charts using Sheets.</p> <p>Children illustrate their data using sparklines and data bars.</p> <p>Children will understand LAN/WAN basics and work within school network conventions.</p> <p>Children will collaborate on spreadsheets, producing charts and sparklines that clearly tell the data story.</p> <p>Children will share outputs via networked folders/services and present findings to stakeholders.</p> <p>Children will adopt agreed version control and file-naming practices.</p> <p>Children will understand and use school networks, collaborate to share and present spreadsheet findings with charts and sparklines.</p>

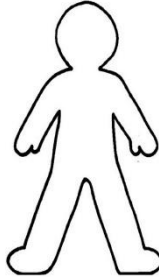

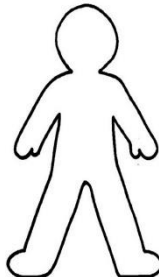

**Intention 5:** It is our intention that children have the opportunity to incorporate computing into the wider curriculum and aspire to develop their understanding of analysis and evaluation techniques.

Year 3	Year 4	Year 5	Year 6
Children will create a volcano animation linked to geography/history and explain the algorithm behind it. Children will adjust timing and sequencing to improve clarity and accuracy. Children will evaluate their animation against success criteria and suggest improvements. Children will reflect on how computing helps them communicate learning in other subjects. Children will link computing to geography/history by producing a volcano animation, explain how their algorithm works, and suggest improvements.	Children will connect computing to music by crafting melodic patterns and exploring tempo/pitch effects. Children will apply Micro:bit sensors and logic to simple real-world tasks (e.g., light/reactive outputs). Children will assess the fitness of their digital solutions for purpose and audience. Children will document choices and evaluate creative/technical outcomes. Children can use a variety of notes, experimenting with pitch Children can explore and understand how music is created. Children will connect computing to the music curriculum (elements, tempo, pitch), evaluate their compositions, and apply sensors/logic to real-world micro:bit tasks.	Children will address a real-world brief and justify design decisions. Children will use databases to support geography inquiries and triangulate information sources. Children will evaluate prototypes for impact, feasibility and ethics, iterating designs accordingly. Children will present conclusions supported by data and reflect on improvements. Children can program IF/THEN statements to introduce selection in their code to make things happen based on changing temperature. Children can add hyperlinks to an external website. Children will tackle a real-world brief (e.g., 'Under the Sea' conservation), justify design choices, evaluate impact of prototypes, and use databases to support geography inquiries.	Children will apply computing in science (investigating electrical conductors with micro:bit I/O) and use spreadsheets to plan/cost events, analysing results and evaluating effectiveness. Children will investigate electrical conductors using Micro:bit inputs/outputs and record results. Children will plan and cost events using spreadsheets, applying formulas and visualising data with charts. Children will analyse results, evaluate the clarity/efficiency of digital outputs, and recommend next steps. Children will present findings to an audience, explaining choices and answering questions confidently.

**End Points/Impact**

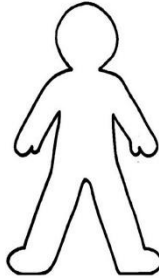

1. Will know how to use technology safely and respectfully on an iPad	<b><u>A great computer technician in Year 3</u></b> 	4. Explore new technology such as microbits.
2. Use and create a branching database for a purpose		5. Apply computing in other subjects.
3. Be able to design, write and debug programs using a sprite.		

1. Will use technology safely, keeping themselves and others safe online recognise online harm and offer appropriate advice.	<b><u>A great computer technician in Year 4</u></b> 	4. Will code a microbit, collaborate effectively when planning, testing and refining code/music.
2. Compose an electronic piece of music.		5. Children can create and use variables when programming.
3. Write and debug Logo and micro:bit programs.		

**THE HARMONY TRUST**  
BELIEVE • ACHIEVE • SUCCEED

1. Will act safely and responsibly online, understanding cybercrime and legal boundaries.	<b><u>A great computer technician in Year 5</u></b> 	4. Use word processing, communicate findings.
2. Design and query flat-file databases and produce formatted Word documents.		5. Apply analysis and evaluation to real contexts and justifying design choices.
3. Can prototype purposeful Micro:bit solutions using events, variables and selection.		

1. Will use technology safely with mature judgement.	<b><u>A great computer technician in Year 6</u></b> 	4. Collaborate and communicate via networks.
2. Select and combine tools effectively to model/present data.		5. Apply computing across the curriculum.
3. Engineer robust Micro:bit programs.		

Our ACE Curriculum

**Aspire★Collaborate★Experience**

**THE HARMONY TRUST**

BELIEVE • ACHIEVE • SUCCEED

## Key stage 2

Pupils should be taught to:

- design, write and debug programs that accomplish specific goals, including controlling or simulating physical systems; solve problems by decomposing them into smaller parts
- use sequence, selection, and repetition in programs; work with variables and various forms of input and output
- use logical reasoning to explain how some simple algorithms work and to detect and correct errors in algorithms and programs
- understand computer networks including the internet; how they can provide multiple services, such as the world wide web; and the opportunities they offer for communication and collaboration
- use search technologies effectively, appreciate how results are selected and ranked, and be discerning in evaluating digital content
- select, use and combine a variety of software (including internet services) on a range of digital devices to design and create a range of programs, systems and content that accomplish given goals, including collecting, analysing, evaluating and presenting data and information
- use technology safely, respectfully and responsibly; recognise acceptable/unacceptable behaviour; identify a range of ways to report concerns about content and contact.

**National Curriculum for KS2**

Our **ACE** Curriculum

**Aspire★Collaborate★Experience**

**THE HARMONY TRUST**

BELIEVE • ACHIEVE • SUCCEED

## Key stage 1

Pupils should be taught to:

- understand what algorithms are; how they are implemented as programs on digital devices; and that programs execute by following precise and unambiguous instructions
- create and debug simple programs
- use logical reasoning to predict the behaviour of simple programs
- use technology purposefully to create, organise, store, manipulate and retrieve digital content
- recognise common uses of information technology beyond school
- use technology safely and respectfully, keeping personal information private; identify where to go for help and support when they have concerns about content or contact on the internet or other online technologies.
