Geography Knowledge Organiser - Volcanoes

Climate: the average weather in a place over time, usually about 30 years, and includes things like temperature, rain, and snow
Archipelago: a group, chain, cluster or collection of islands.
Physical geography: the natural environmental features (mountains, rivers etc.) and processes (erosion, movement of tectonic plates etc.) of a place.
Human geography: the presence of people and how the way in which they live interacts with that natural environment.
Ash cloud: small pieces of rock and glass that can be carried in the air.
Lava: hot molten or semi-fluid rock erupted from a volcano.
Magma: molten rock originating in the Earth's mantle.
Tectonic plates: large, moving pieces of solid rock that form the Earth's outer layer.
Economic activity: the production of goods or a service that other people purchase.
Trade: buying or selling goods or services.
Import: to bring goods or services into one country from another.
Export: to sell goods or services to another country.

Active – volcano that has erupted recently or is erupting
Dormant – volcano that has not erupted recently but is expected to erupt again
Extinct – volcano that has not erupted recently and will never erupt again
